

LIST OF FIGURES

Figure No.	Title	Page No.
Figure 1.1	Electromagnetic spectrum showing ionizing and non-ionizing radiation	3
Figure 1.2	Non-nuclear applications of ionizing radiations	4
Figure 1.3	Industrial radiography setup.....	6
Figure 1.4	Radiographic image of welding in a pipe	6
Figure 1.5	Safety components.....	10
Figure 1.6	The process flow of research work for design analysis and risk assessment for industrial radiography exposure devices.....	12
Figure 1.7	The process flow of research work for operational analysis and risk assessment in industrial radiography practice.....	13
Figure 3.1	Illustration of growth of industrial radiography devices in operation.....	35
Figure 3.2.	Illustration of growth of industrial radiography institutions in India.....	35
Figure 4.1.	Sketch of industrial gamma radiography exposure device.....	42
Figure 4.2	Source housing of various IGRED models used in India	44
Figure 4.3	Picture of a remote control unit of IGRED	45
Figure 4.4	Picture of a guide tube assembly of IGRED	46
Figure 4.5	Drawing and picture of flexible source pigtail assembly	47
Figure 4.6	Picture of rigid source pencil assembly	48

Figure 4.7	Verification of pigtail dimensions by Go- NOGO Gauge	55
Figure 4.8	Process flow for FMEA study	64
Figure 4.9	Graphical representation for distribution of component failures.....	79
Figure 4.10	Crimping part of the control cable and source assembly	86
Figure 5.1	Portable radiation survey meters and fixed area monitors	93
Figure 5.2	Fault tree analysis for failure of portable radiation survey meter.....	100
Figure 5.3	Fault tree analysis for failure of fixed gamma zone monitor	101
Figure 5.4.	Schematic diagram of open field radiography	105
Figure 5.5	Standard operating procedures for industrial gamma radiography operations in open field	110
Figure 5.6	Standard operating procedures for industrial gamma radiography operations inside enclosed installation.....	111
Figure 6.1	Representation of median and inter quartile range	121
Figure 6.2	Event tree for open field gamma radiography operations	130
Figure 6.3	Event tree for enclosed gamma radiography operations	131

LIST OF TABLES

Table No.	Title	Page No.
Table 2.1	Summary of risk assessment studies in radiation facilities carried out with support of IAEA	20
Table 2.2	Guidance documents for risk assessment studies for radiation facilities	29
Table 3.1	Characteristics of gamma ray sources used in industrial radiography application	33
Table 3.2	Details of approved IGRED models in use in India	37
Table 4.1	Maximum permissible ambient equivalent dose rate for IGRED in mSv/h (mR/h)	43
Table 4.2	Summary of performance tests as per international design requirements for IGRED	53
Table 4.3	FMEA ranking for Probability of Occurrence (O) for component failure	70
Table 4.4	FMEA ranking for Severity (S) of component failure	71
Table 4.5	FMEA ranking for Detection (D) of component failure	72
Table 4.6	FMEA result	75
Table 4.7	Categorization of failure modes based on the acceptance criteria	80

Table 5.1	Prescribed annual dose limits for occupational worker and public in India	92
Table 5.2	Component failure data for radiation survey meter and gamma zone monitor	99
Table 6.1	Median and IQR values from the first round of Delphi survey responses	123
Table 6.2	Median and IQR values of the responses of the second round of Delphi survey	125
Table 6.3	Categorization of resultant radiation exposure	127
Table 6.4	Assessment results for probabilities of radiation exposure to operating personnel	132
Table 6.5	Main contributing factors for each category of potential exposure	135
