

<b>Name:</b> <b>Enrolment No:</b>			
<p style="text-align: center;"><b>UPES</b>  <b>End Semester Examination, May 2025</b></p> <p> <b>Course: Introduction to MATLAB Programming</b>      <b>Semester : IV</b>  <b>Program: B.Sc. Physics by Research</b>      <b>Time : 03 hrs.</b>  <b>Course Code: CSEG 2054K</b>      <b>Max. Marks: 100</b> </p> <p> <b>Instructions: <u>Read the questions clearly and provide needed details only.</u></b>  <b>All questions are mandatory in Section A.</b>  <b>Internal choices are given in questions 6 and 11 of Sections B and C respectively.</b> </p>			
<b>SECTION A</b> <b>(5Qx4M=20Marks)</b>			
S. No.		Marks	CO
Q 1	Explain what MATLAB is and how MATLAB is different from other computational software such as MATHEMATICA and MAPLE?	4	CO1
Q 2	Using MATLAB, compute the radius of a circle having unit area.	4	CO1
Q3	Compute the following using MATLAB: $e^3, \ln(e^3), \log_{10}(10^5)$	4	CO2
Q 4	Using MATLAB programming, compute the following trigonometric functions: $\sin^2 \frac{\pi}{6} + \cos^2 \frac{\pi}{6}$ and $y = \cosh^2 x - \sinh^2 x$ , with $x = 32\pi$	4	CO2
Q5	Using for loop statement in MATLAB write the code to compute the factorial of a given number.	4	CO3
<b>SECTION B</b> <b>(4Qx10M= 40 Marks)</b>			
Q6	Using the curve fitting methods in MATLAB computer programming, fit the data generated from the $y = A \sin (B x + C)$ , where A, B, C are constants. <p style="text-align: center;"><b>OR</b></p> Using the curve fitting methods in MATLAB computer programming fit the data generated from the $y = A \exp(B.x)$ , and $y = A \log(x) + B$ , where A, B are constant.	10	CO3
Q7	Given the electric field of a point charge in free space:	10	CO4

	$\vec{E} = \frac{q}{4\pi\epsilon_0} \frac{\vec{r}}{r^3}$ <p>Using MATLAB programming, examine the divergence of the given electric field and verify Gauss's law in differential form.</p>		
Q8	<p>(a) Explain the quiver function.</p> <p>(b) Create a 2D meshgrid for <math>x, y \in [-5, 5]</math>.</p> <p>(c) Calculate the gradient of the function: <math>f(x, y) = x^2 + y^2</math>.</p> <p>(d) Plot the gradient vectors using the quiver function in MATLAB programming.</p>	<p><b>10</b></p> <p>(3+2+3+2)</p>	<b>CO4</b>
Q9	<p>A hot object cools down to an ambient temperature at a rate proportional to the temperature difference. If the ambient temperature is <math>20^\circ\text{C}</math> and the initial object temperature is <math>80^\circ\text{C}</math> with a cooling constant of 0.07. Using MATLAB computer programming, find the temperature after 30 minutes.</p>	<p><b>10</b></p>	<b>CO2</b>
<p align="center"><b>SECTION-C</b> <b>(2Qx20M=40 Marks)</b></p>			
Q10	<p>The three-dimensional vector field is given by:</p> $\vec{F} = 2x^2y \hat{i} + y^2z \hat{j} + z^2x \hat{k}$ <p>Using MATLAB programming compute:</p> <p>(a) The divergence of the vector field at (-2, 3, 4).</p> <p>(b) Visualize the vector field using quiver function.</p> <p>(c) Plot the diverging field using isosurface function.</p>	<p><b>20</b></p> <p>(10+5+5)</p>	<b>CO4</b>
Q11	<p>The velocity of a free vortex is :</p> $V = \left( \frac{-ky}{x^2 + y^2}, \frac{-kx}{x^2 + y^2}, 0 \right)$ <p>where k is a constant. Using MATLAB compute:</p> <p>(a) The curl of the given vector field.</p> <p>(b) Plot the given vector field.</p> <p>(c) Visualize the vorticity distribution.</p> <p align="center"><b>OR</b></p>	<p><b>20</b></p> <p>(10+5+5)</p>	<b>CO4</b>

	<p>A fluid is rotating like a rigid body with velocity:</p> $\mathbf{V} = (-\omega y, \omega x, 0)$ <p>where <math>\omega</math> is a constant angular velocity.</p> <p>(a) Find the curl <math>\nabla \times \mathbf{V}</math>. What does this represent physically?</p> <p>(b) Plot the vector function.</p> <p>(c) Plot the curl of the vector function.</p>
