

Analysis & Redesigning of Watermills for Sustainable Development of Rural Areas of Uttarakhand

CONTENTS

Contents	Page
List of Figures	
List of Tables	
List of Symbols	
List of Graphs	
List of Abbreviations	
Chapter 1- Introduction	1
1.1 Existing Status	3
1.2 Technology	4
1.3 Existing Status Of Watermills	4
1.4 Objectives Of Research	6
1.5 Methodology	6
Chapter 2- Renaissance Of Watermills For Sustainable Development In Rural Uttarakhand	8
Chapter Overview	8
2.1 Millennium Development Goals	9
2.2 Challenges Before The Country	10
2.3 The Energy Scene	10
2.4 Demand And Supply Gap	11
2.5 Energy Scenario In Uttarakhand	12
2.6 Roadmap To Strengthen The Power Sector	13
2.6.1 Generation	14
2.6.2 Transmission	15
2.6.3 Distribution	15
2.6.4 Policy Framework and Capacity	16
2.7 Power Sector Analysis	17
2.7.1 Northern Region Supply and Demand Scenario	17

Analysis & Redesigning of Watermills for Sustainable Development of Rural Areas of Uttarakhand

2.7.2	Performance of The Power Sector in Uttarakhand	18
a.	Generation Potential And Expansion Plans	
	Transmission System Expansion	
b.	Distribution Operations	
2.8	Small Hydro Potential/Projects	21
2.8.1	Allotment Procedure	22
2.8.2	Evacuation Of Power	23
2.8.3	General Experience	23
2.8.4	Rural Electrification	24
2.8.5	Challenges	26
2.9	New Initiative: Watermills/Gharat	27
	Summary	28
Chapter 3-	Engineering Analysis & Assessment Of Existing	29
Watermills		
	Chapter Overview	29
3.1	Gharat	29
3.2	Existing Watermill	30
3.3	Rational for Improvement in Existing Watermill	33
3.4	Present Condition of Watermill	34
3.4.1	Present Status of Watermill	35
a.	Traditional Watermill	
b.	Upgraded Watermill	
c.	District wise Status of Existing Watermill	
3.4.2	Current usage of Watermills	39
3.4.3	Working condition of watermills	40
3.4.4	Majority of watermills work year round.	41
3.4.5	Potential for Up Gradation of Watermills	42
3.4.6	Watermills are located at a great distance from village	43
3.4.7	Watermills are Located at a Great Distance from	45

Analysis & Redesigning of Watermills for Sustainable Development of Rural Areas of Uttarakhand

Road Head	
3.4.8 Status of Electrification	47
3.4.9 Average Annual Discharge	48
3.4.10 Available Head	50
3.4.11 Distance of water Mills from Nearest Village	53
3.4.12 No of Households Within 500 m	54
3.4.13 Reasons for Non Functioning of Watermill	55
3.5 Other Observations	56
3.6 Lab testing of existing improved watermill	59
3.7 Test Results	61
3.7.1 Cross flow Turbine	61
3.7.2 Axial flow Turbine	63
3.7.3 Pelton Wheel	64
3.7.4 Improved Watermill	65
3.8 Performance Comparison of Various Turbine	67
3.9 Identification of Design Improved Parameters	68
Summary	69
Chapter 4- Engineering Re Design & Prototype Development Of Watermill System	70
Chapter Overview	70
4.1 Parts of Watermill System	71
4.1.1 Penstock	71
4.1.2 Nozzle	71
4.1.3 Runner	71
4.1.4 Drive Shaft	71
4.1.5 Bottom Bearing	72
4.2 Watermill Efficiency	72
4.2.1 Hydraulic Efficiency	73
4.2.2 Mechanical Efficiency	73
4.2.3 Volumetric Efficiency	73

Analysis & Redesigning of Watermills for Sustainable Development of Rural Areas of Uttarakhand

4.3	Effect of various Components on Efficiency	74
4.3.1	Penstock	74
4.3.2	Nozzle	75
4.3.3	Diameter of Runner	76
4.3.4	Material of Runner	76
4.3.5	Bearing	77
4.4	Penstock	77
4.4.1	Material for Penstock	77
	a. Polyethylene	
	b. Polyvinyl chloride	
	c. Concrete	
	d. Steel	
4.4.2	Design of Penstock	79
4.4.3	Penstock Support	
4.5	Nozzle	84
4.6	Design of Watermill	87
4.6.1	Design of turbine runner	87
4.6.2	Number of blade	89
4.6.3	Design of shaft	91
4.6.4	Material used in Turbine	93
	a. Stainless steel	
	b. High strength micro alloy	
	c. Carbon steel	
4.6.5	Factors effecting selection of material	95
	a. Roughness of material	
	b. Corrosion resistance	
	c. Life	
4.7	Bearing	97
4.7.1	Ball bearings	97
4.7.2	Thrust bearings	97

Analysis & Redesigning of Watermills for Sustainable Development of Rural Areas of Uttarakhand

4.7.3	Water lubricated bearing	97
4.7.4	Self lubricating bearing	97
4.8	Other factors Affecting Efficiency	99
4.8.1	Effect of Jet Ratio on specific speed	99
4.8.2	Effect of specific speed on efficiency	101
4.8.3	Impact of blade angle on Efficiency	102
4.9	Improvements	103
4.9.1	Controlling the Diameter of Jet	103
4.9.2	Nozzle Control	107
4.9.3	Putting one trash rack and a tank (de siltation tank) before penstock	110
4.10	Multipurpose Watermill	112
	Summary	115
Chapter 5-	Operation & Maintenance Practices	116
	Chapter Overview	116
5.1	Parameters for Layout Design	116
5.2	Improved Watermill	119
5.3	Site Surveying	121
5.3.1	Determining the Head	121
	a. Using a Water-filled Tube	
	b. Using Sprit Level and Wooden Plank	
5.3.2	Flow Measurement	123
	a. Bucket Method	
	b. Float Method	
	c. Weir method	
5.4	Installation procedure	128
5.5	Operation	129
5.6	Maintenance	130
5.6.1	Maintenance of Chute Inlet	130

Analysis & Redesigning of Watermills for Sustainable Development of Rural Areas of Uttarakhand

5.6.2	Maintenance of Water Chute	130
5.6.3	Bottom Bearing Ball	130
5.6.4	Maintenance Tips for Bearing	130
5.6.5	Alignment of the Shaft	131
5.6.6	Maintenance Check List and Schedule	132
5.6.7	Penstock Installation	133
5.6.8	Construction of Forebay	134
5.6.9	Construction of Power Channel	134
5.6.10	Tailrace	135
5.7	Routine Maintenance	136
	Summary	136
Chapter 6- Conclusion and Future Scope of Research		144
References		152
Appendices		
A1.	Survey Performa	154
A2.	Economic Analysis of Watermill	156
A3.	Software	161
