| UNIVERSITY OF PETROLEUM AND ENERGY STUDIES End Semester Examination, May 2018 |  |  |  |
| :---: | :---: | :---: | :---: |
| Course: Rotordynamics and Condition Monitoring (MREQ 812) <br> Semester: II <br> Program: M.Tech. Rotating Equipment <br> Time: 03 hrs. <br> Max. Marks: 100 |  |  |  |
| SECTION A |  |  |  |
| S. No. |  | Marks | CO |
| Q 1 | Describe, with the aid of a sketch when necessary, each of the following: <br> a) Spring force, damping force, inertia force, excitation <br> b) Free vibration, forced vibration <br> c) Steady state response, transient motion <br> d) Periodic motion, frequency, period, beat frequency | 4 | CO1 |
| Q 2 | Solve the homogeneous equation $\ddot{x}+4 \dot{x}+13 x=0$ for the following initial conditions: $x(0)=1 \wedge \dot{x}(0)=0$ | 4 | CO1 |
| Q 3 | Calculate the natural frequency of the system shown in Fig. 1. Assume that the cantilevers are of negligible mass and their equivalent spring constants are $k_{1}$ and $k_{3}$. <br> Fig.1: Figure for Q 3 | 4 | CO2 |
| Q 4 | Describe briefly the concept of balancing in rigid and flexible rotors. | 4 | CO2 |
| Q 5 | The following data are given for a system with viscous damping: mass $m=4 \mathrm{~kg}$, spring constant $k=5 \mathrm{kN} / \mathrm{m}$, and the amplitude decreases to 0.25 of the initial value after five consecutive cycles. Find the damping coefficient of the damper. | 4 | CO1 |
| SECTION B |  |  |  |
| Q 6 | A rotating machine for research has an annular clearance of 0.8 mm between the rotor and the stator. The mass of the rotor is 36 kg with an unbalance of $3 \times 10^{-3} \mathrm{~kg}$ m . The rotor is mounted symmetrically on a round shaft, 300 mm in length and supported by two bearings. The operating speed ranges from 600 to 6000 rpm . If the | 10 | CO3 |

|  | dynamic deflection of the shaft is to be less than 0.1 mm , specify the size of the <br> shaft. |  |  |
| :--- | :--- | :--- | :--- |
| Q 7 | A circular disk of 18 kg is mounted symmetrically on a shaft, 0.75 m in length and <br> 20 mm in diameter. The mass center of the disk is 3 mm from its geometric center. <br> The unit is rotated at 1000 rpm and the damping factor is estimated to be 0.05. <br> Calculate the dynamic load on the bearings. | $\mathbf{1 0}$ | $\mathbf{C O 3}$ |
| Q 8 | A force ' $P_{0} \sin \omega t '$ acts on a displacement ' $x_{0}$ sin ( $\omega t-\pi / 3$ )'. If $\mathrm{P}_{0}=100 \mathrm{~N}, \mathrm{x}_{0}=0.02$ <br> $\mathrm{~m}, \omega=2 \pi$ rad/s. Find the work done during (i) the first cycle (ii) the first second (iii) <br> the first quarter second. | $\mathbf{1 0}$ | $\mathbf{C O 1}$ |
| Q 9 | Explain the design theory of vibration measuring instruments. <br> OR |  |  |
| Derive the frequency response of a spring-mass-damper system for base excitation <br> case. | $\mathbf{1 0}$ | $\mathbf{C O 3}$ |  |

## SECTION-C

| Q 10 | Consider the undamped system $M\|\ddot{x}\|+K\|x\|=\|Q(t)\|$.  <br> $\left[\begin{array}{ll}4 & 0 \\ 0 & 1\end{array}\right]\left\{\begin{array}{l}\ddot{x}_{1} \\ \ddot{x}_{2}\end{array}\right\}+\left[\begin{array}{cc}24 & -4 \\ -4 & 6\end{array}\right]\left\{\begin{array}{l}x_{1} \\ x_{2}\end{array}\right\}=\left\{\begin{array}{l}8 \\ 0\end{array}\right\}$  <br> a) Find the eigenvalues  <br> b) Evaluate the modal matrix [u].  <br> c) Derive the uncoupled equations expressed in the principal coordinates. <br> d) Express the uncoupled equations in the global/normal coordinates.  | $\mathbf{2 0}$ | $\mathbf{C O 3 /}$ <br> $\mathbf{C O 4}$ |
| :--- | :--- | :---: | :---: |
| Q 11 | Describe the significance of condition monitoring in the area of rotordynamics. <br> OR <br> Describe the impact of vibration on human health. | $\mathbf{2 0}$ | $\mathbf{C O 5}$ |
