| Cours <br> Progr <br> Cours <br> Instru | UNIVERSITY OF PETROLEUM AND ENERGY STUDIES <br> End Semester Examination, December 2019 <br> Pumps, compressor, selection, sizing and spees <br> Semester: <br> : M. Tech Pipeline Engineering <br> Time 03 hrs. <br> Code: MECH7001 <br> Max. Marks | $100$ |  |
| SECTION A |  |  |  |
| S. No. |  | Marks | CO |
| Q 1 | What is the significance of characteristic curve of centrifugal pumps? | 4 | CO1 |
| Q2 | Describe clearly the term slip and power input factor as applied to centrifugal compressor. | 4 | CO1 |
| Q3 | Explain construction detail of globe valve. | 4 | CO1 |
| Q4 | What is the importance of the (Net positive suction head) NPSH. | 4 | CO1 |
| Q5 | Discuss the advantages of the use of intercooler in the compressor. | 4 | CO1 |
| SECTION B |  |  |  |
| Q6 | A centrifugal pump impeller whose runs at 80 RPM and has outlet vane angle of $60^{\circ}$. The velocity of flow is $2.5 \mathrm{~m} / \mathrm{s}$ throughout and diameter of the impeller at exit is twice that at inlet. If the manometric head is 20 m and the manometric efficiency is $75 \%$, Determine: <br> The diameter of the impeller at the exit and Inlet vane angle. | 10 | CO2 |
| Q7 | A single acting reciprocating pump, running at 50 rpm . Delivers $0.008 \mathrm{~m}^{3} / \mathrm{s}$ of water. The diameter of the piston is 250 mm and stroke length 350 mm . the suction and delivery heads are 3.8 and 11.4 m respectively. Determine: <br> a) Theoretical discharge, <br> b) Coefficient of discharge, <br> c) Percentage slip of the pump, <br> d) Power required to run the pump. | 10 | CO2 |
| Q8 | A centrifugal compressor delivers 50 kg of air per minute at a pressure of 2 bar and $97^{\circ} \mathrm{C}$. The intake pressure and temperature of the air is 1 bar and $15^{\circ} \mathrm{C}$. If no heat loss to the surrounding, find: a) index of compression and b) power required, if the compression is isothermal. Take $\mathrm{R}=287 \mathrm{j} / \mathrm{kgK}$. | 10 | $\mathrm{CO3}$ |

| Q9 | Find the diameter and stroke of a single- stage, single acting air compressor. The pressure at inlet and discharge are 1.1 bar and 7.7 bar respectively. The speed of the compressor is $240 \mathrm{r} . \mathrm{p} . \mathrm{m}$. and speed of the piston is limited to $150 \mathrm{~m} / \mathrm{min}$. the I.P. of the compressor is 14 kW . Neglect the effect of clearance and assume the index for compression and re expansion is 1.2 . <br> OR <br> A centrifugal pump running at 1000 rpm discharges 250 litres $/ \mathrm{min}$ of water against a lift of 30 m . at the outlet, the vanes are swept back at 30 degrees and the velocity of flow is $3 \mathrm{~m} / \mathrm{s}$. if the hydraulic efficiency is 80 percent, determine the diameter and width of impeller at outlet. | 10 | CO3 |
| :---: | :---: | :---: | :---: |
| SECTION-C |  |  |  |
| Q 10 | A centrifugal compressor runs at $250 \mathrm{rev} / \mathrm{s}$ and delivers 10 kg of air/s at a pressure ratio of $4.5: 1$. The slip factor and the isentropic efficiency are 0.9 and 0.8 respectively. The flow velocity of air in the impeller at inlet and at exit is equal to $150 \mathrm{~m} / \mathrm{s}$. the flow coefficient at the impeller exit $=0.3$. The hub diameter of the eye $=15 \mathrm{~cm}$. Assuming equal pressure ratio in impeller and diffuser and ambient conditions as $20^{\circ} \mathrm{C}$ and $100 \mathrm{kN} / \mathrm{m}^{2}$ calculate: <br> a) The impeller diameter at the impeller exit, and inlet. <br> b) The power required to drive the compressor. <br> c) Width of the impeller at its exit. <br> OR <br> A centrifugal compressor delivers $9 \mathrm{~m}^{3} / \mathrm{s}$ of free air when running at 11000 rpm . The air is drawn in at 1 bar and 300 K and delivered at 3.5 bars. The isentropic efficiency is $85 \%$. Blades are radial at the outlet and constant flow velocity is $65 \mathrm{~m} / \mathrm{s}$. The outlet diameter of impeller is twice the inner and the slip factor may be taken as 0.9 . The blade area coefficient at inlet is 0.9 and power input factor is 1.04 . Calculate: temperature of air at outlet, power required to drive the compressor, impeller diameter at inlet and outlet, width of the impeller at inlet, the impeller blade angle at inlet and diffuser blade angle at inlet. | 20 | CO4 |
| Q11 | a. A single acting, single stage air compressor is required to compress 2.8 kg of air per minute at 1.013 bar and temperature $27^{\circ} \mathrm{C}$ to a pressure of 7.1 bar . The clearance volume is $5 \%$ of the stroke volume and the law for compression and for expansion is $\mathrm{pv}^{1.25}=$ constant. If the stroke is 1.2 times the bore and compressor runs at 150 rpm . Determine the size of cylinder $\mathrm{R}=0.287 \mathrm{~kJ} / \mathrm{kg}-\mathrm{K}$. What is the net heat transferred per minute during compression and expansion stroke? Take $\gamma=1.4$ <br> b. Explain the different efficiencies involve with the centrifugal pump. | 15+5 | $\begin{aligned} & \mathrm{CO4}, \\ & \mathrm{CO1} \end{aligned}$ |
