Enrolment No:	

UNIVERSITY OF PETROLEUM AND ENERGY STUDIES
End Semester Examination, December 2019

Course: Energy Management

Semester: V

Program: B. Tech – E&CE/FSE/Che-Spz-R&P/APE-Spz-GS/Mechatronics/ME/Civil-Spz-Infra/ADE/PSE/GIE

Course Code: EPEC 3202

Time 03 hrs.

Instructions:

Max. Marks: 100

Section A: Attempt all questions

Section B: Attempt all questions and Attempt any one from question Q9(a) or Q9(b).

Section C: Attempt all questions and Attempt any one from question Q11(a) or Q11(b).

SECTION A

S. No.		Marks	CO
Q 1	List down the key outcomes of reserve to production ratio with reference to developing and developing countries.	4	CO1
Q2	Describe Energy Conservation by giving two examples.	4	CO2
Q3	List any four roles of BEE as defined in Energy Conservation Act 2001.	4	CO3
Q4	Describe Energy Security and list any four measures which can improve the Energy Security in reference to Indian Economy.	4	CO1
Q5	Illustrate Sankey diagram with any one relevant example.	4	CO4

SECTION B

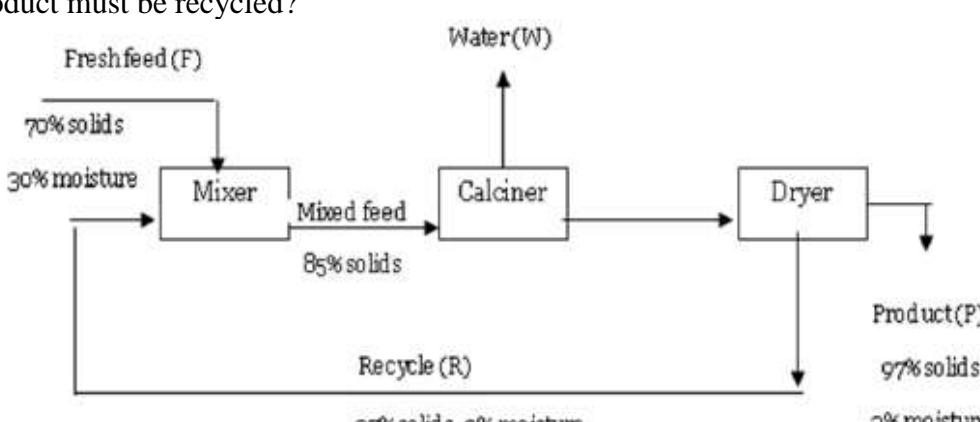

Q 6	Describe in detail how the electrical energy pricing is done and discuss the factors which can impact the cost of electricity at domestic and commercial level.	10	CO1
Q7	Explain any five forms of energy with relevant example.	10	CO2
Q8	Discuss some key roles and responsibilities of BEE defined as per the Energy Conservation Act 2001.	10	CO3
Q9(a)	(i) Discuss any one initiative in detail taken globally to combat against the climate change. (ii) List various energy audit instruments and list their utility.	10	CO1, CO4

OR

Q9 (b)	Describe the procedure of conducting detail energy audit and discuss various outcomes of the detail energy audit which can help in reducing the impact of organization activity on climate.	10	CO1, CO4
--------	---	----	-------------

SECTION-C

Q 10	With the help of neat diagram explain various Earth Cycles in detail and list down the impacts of each cycle disturbance caused due to various human activities.	20	CO1, CO2
-------------	--	-----------	---------------------

Q11(a)	<p>The energy consumption pattern in a steel rolling mill over 8 month period is provided in the table below;</p> <table border="1" data-bbox="432 264 1019 855"> <thead> <tr> <th>Month</th><th>Production (Tons)</th><th>Coal Consumption (Tons)</th></tr> </thead> <tbody> <tr><td>1</td><td>488</td><td>422</td></tr> <tr><td>2</td><td>553</td><td>412</td></tr> <tr><td>3</td><td>455</td><td>411</td></tr> <tr><td>4</td><td>325</td><td>363</td></tr> <tr><td>5</td><td>488</td><td>438</td></tr> <tr><td>6</td><td>585</td><td>426</td></tr> <tr><td>7</td><td>455</td><td>414</td></tr> <tr><td>8</td><td>419</td><td>396</td></tr> </tbody> </table>	Month	Production (Tons)	Coal Consumption (Tons)	1	488	422	2	553	412	3	455	411	4	325	363	5	488	438	6	585	426	7	455	414	8	419	396					20 CO4
Month	Production (Tons)	Coal Consumption (Tons)																															
1	488	422																															
2	553	412																															
3	455	411																															
4	325	363																															
5	488	438																															
6	585	426																															
7	455	414																															
8	419	396																															
	<p>Estimate</p> <ul style="list-style-type: none"> i) Fixed energy consumption in the Mill. ii) Expected coal consumption for a production of 600 Tons/month. 																																
Q11(b)	<p>In a drying operation, it is necessary to hold the moisture content of feed to a calciner to 15% (w/w) to prevent lumping and sticking. This is accomplished by mixing the feed having 30% moisture (w/w) with recycle stream of dried material having 3% moisture (w/w). The dryer operation is shown in fig below. What fraction of the dried product must be recycled?</p>  <pre> graph LR F[Fresh feed (F)] -- "30% moisture" --> Mixer[Mixer] R[Recycle (R)] -- "97% solids, 3% moisture" --> Mixer Mixer -- "70% solids" --> Calciner[Calciner] Calciner -- "Mixed feed" --> Dryer[Dryer] Dryer -- "Product (P) 97% solids 3% moisture" --> P[Product (P)] P --> R </pre>					20 CO4
