**Roll No: -----**

## UNIVERSITY OF PETROLEUM AND ENERGY STUDIES

## **End Semester Examination, Dec 2019**

Program: MBA LSCM Semester – I

Subject (Course): Quantitative Methods
Course Code : DSQT-7001

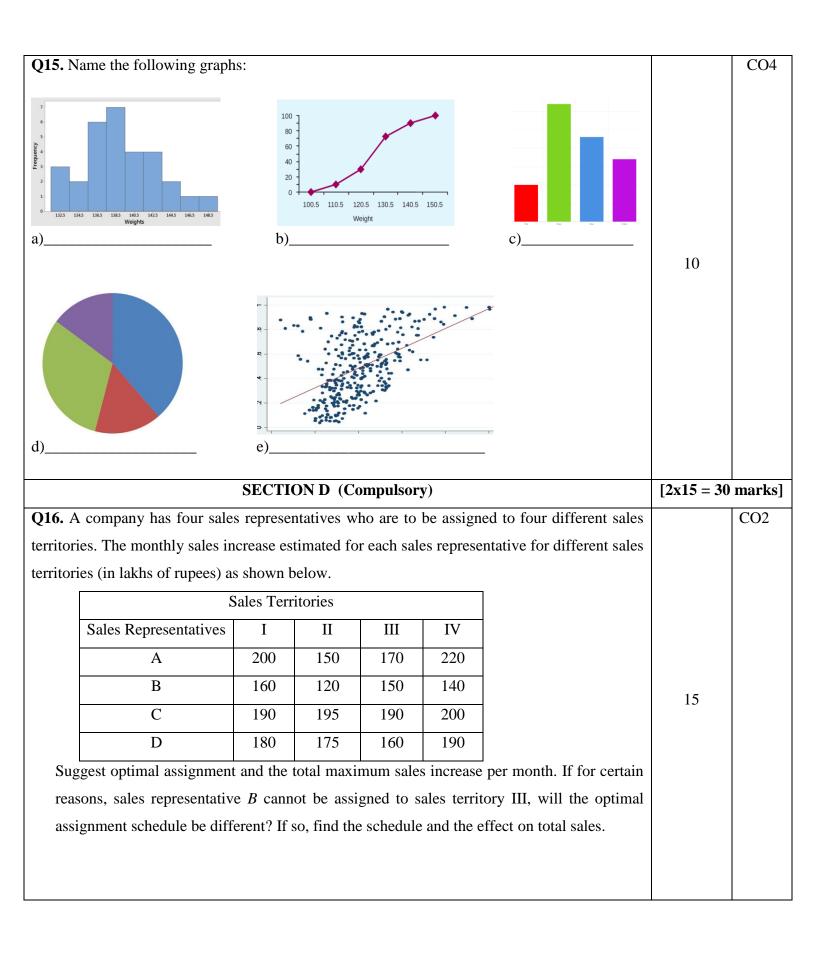

Max. Marks : 100
Duration : 3 Hrs

No. of page/s: 5

SECTION A (Attempt all)	[10x2 = 20  marks]		
Q1. Which normal distribution is better?		CO4	
(a) N (40, 5)			
<b>(b)</b> N (50, 5)	2		
(c) N (40, 10)			
(d) All of these			
<b>Q2.</b> Find $f(x + h) - f(x)$ given that $f(x) = a x + b$	3	CO1	
Q3. Determine the nth term of this series		CO4	
3, 5, 7, 9	3		
<b>Q4.</b> The electrostatic force F, is measured in Newton's, between two charged particles can be related to the distance between the particles d, in centimetres, by the formula $F(d)=2/d^2$ . Find the average rate of change of force if the distance between the particles is increased from 2 cm to 6 cm.	3	CO1	
Q5. Answer True/False		CO1,	
a) A closed loop would always involve an even number of cells, subject to a minimum of 4.		CO2,	
<b>b</b> ) An iso-cost line cannot be parallel to the line of constraint.		CO3	
c) VAM cannot be used to find an initial solution to a transportation problem if some routes are			
given to be prohibited.	5		
<b>d)</b> The Big-M method and the Two-Phase method require the same number of iterations for solving a linear programming problem.	3		
e) An assignment problem is said to be balanced when the number of rows in the given matrix matches with the number of columns.			

a) $\sum \left(Y-\overline{Y}\right)^2$ b) $\sum \left(Y-\hat{Y}\right)^2$ c) $\sum \left(Y+\hat{Y}\right)^2$ d) None of these  Q7. Which of the following is NOT an example of compressed data?  a) Frequency distribution b) Probability distribution c) Data array d) Histogram e) Ogive f) Pareto chart  SECTION B (Attempt any four)  Q8. A manufacturing firm needs 5 component parts. Due to inadequate resources, the firm is unable to manufacture all its requirement. So the management is interested in determining as to how many, if any, units of each component should be purchased from outside and how many should be produced internally. The relevant data are given here. $ \frac{\text{Component}}{\text{C}_1}  \frac{\text{M}}{\text{A}}  \frac{1}{\text{I}}  \frac{\text{TR}}{\text{R}}  \frac{\text{PP}}{\text{PC}}  \text{PC}}{\text{C}_1}  \frac{4}{\text{A}}  \frac{1}{\text{I}}  \frac{1}{\text{I}}  \frac{1}{\text{C}}  \frac{1}{\text{A}}  \frac{1}{\text{A}}  \frac{1}{\text{C}}  \frac{1}{\text{A}}  \frac{1}{\text{A}}  \frac{1}{\text{C}}  \frac{1}{\text{A}}  \frac{1}{\text{A}}  \frac{1}{\text{C}}  \frac{1}{\text{A}}  \frac$	<b>Q6.</b> The variation of t		alues arc	ound the	regressi	on line is	best expr	ressed as:		CO5
d) None of these  Q7. Which of the following is NOT an example of compressed data?  a) Frequency distribution b) Probability distribution c) Data array d) Histogram e) Ogive f) Pareto chart  SECTION B (Attempt any four)  Q8. A manufacturing firm needs 5 component parts. Due to inadequate resources, the firm is unable to manufacture all its requirement. So the management is interested in determining as to how many, if any, units of each component should be purchased from outside and how many should be produced internally. The relevant data are given here. Q14. A finished pro	oduct	must v	weigh	exactl	y 150	grams	s. The	two 1	aw ma	terials used in		CO2
manufacturing the product are $A$ , with a cost of Rs 2 per unit and $B$ with a cost of Rs 8 per unit.												
At least 14 units of B and not more than 20 units of A must be used. Each unit of A and B weighs												
5 and 10 grams respectively. How much of each type of raw material should be used for each							10					
unit of the final product in order to minimize the cost? Use Simplex method.												
												<u> </u>

	<b>Q17.</b>	Given	the	follo	wing	trans	portation	problem:
--	-------------	-------	-----	-------	------	-------	-----------	----------

Warehouse		Supply		
w arenouse	A	В	С	Бирргу
1	10	12	7	180
2	14	11	6	100
3	9	5	13	160
4	11	7	9	120
Demand	240	200	220	

Determine the least cost transport schedule using NWCCM and LCCM. Which is the best method?

15

CO2
