|  |  |  |  |
| SECTION A <br> Instruction: complete the statement or select the correct answer(s) |  |  |  |
| S. No. |  | $\begin{gathered} \hline \text { Mar } \\ \text { ks } \\ \hline \end{gathered}$ | CO |
| Q 1 | i. An analysis of the algorithm, the approximate relationship between the size of the job and the amount of work required to do is expressed by using <br> a. Central tendency <br> b. Order of Storage. <br> c. Order of execution <br> d. Order of magnitude <br> ii. which of the following is incorrect <br> a. $100 n \log n=O\left(\frac{n \log n}{100}\right)$ <br> b. $2^{n} \neq O\left(n^{k}\right)$ <br> c. $\sqrt{\log n}=O(\log \log n)$ <br> d. if $0<x<y$ then $n^{x}=O\left(n^{y}\right)$ | 5 | CO1 |
| Q 2 | i. which sorting algorithm needs the minimum number of swaps <br> a. Bubble sort <br> b. Quicksort <br> c. Merge sort <br> d. selection sort <br> ii. apply the two-way merge sort algorithm to sort the following elements in ascending order: $20,47,15,8,9,4,40,30,12,17$ then the order of these elements after second pass of the algorithm is <br> a. $8,9,15,20,47,4,12,17,30,40$ <br> b. $15,20,47,4,8,9,12,30,40,17$ <br> c. $4,8,9,15,20,47,12,17,30,40$ <br> d. $8,15,20,47,4,9,30,40,12,17$ | 5 | CO 2 |
| Q 3 | i. Let G be a weighted connected undirected graph with distinct positive edge weights. If every edge weight is increased by the same value, then which of the following statements is/are TRUE <br> P: Minimum spanning tree of G does not change <br> Q: Shortest path between any pair of vertices does not change <br> a. P only <br> b. Q only <br> c. Both P and Q <br> d. None <br> ii. The complexity of Kruskal's s algorithm for finding the minimum spanning tree of an undirected graph containing $m$ vertices and $n$ edges if the edges are sorted is...... <br> a. $\mathrm{O}(\mathrm{n} \log \mathrm{m})$ <br> b. $\mathrm{O}(\mathrm{nm})$ <br> c. $O(m \log n)$ <br> d. $\mathrm{O}(\mathrm{mn})$ | 5 | CO 3 |
| Q 4 | i. The time complexity of computing transitive closure of binary relation on a set of ' $n$ ' elements is <br> a. $O(n)$ <br> b. $O(n \log n)$ <br> c. $O\left(n^{3}\right)$ <br> d. $O\left(n^{2}\right)$ | 5 | CO4 |

|  | ii. The maximum number of comparisons needed to sort 8 items using radix sort with 5 digits octal number. <br> a. 40 <br> b. 64 <br> c. 320 <br> d. 400 |  |  |
| :---: | :---: | :---: | :---: |
| Q 5 | i. Choose the correct answer for the following statements: <br> A. The theory of NP-completeness provides a method of obtaining a polynomial-time for NP algorithms <br> B. All NP-complete problems are NP-Hard. <br> a. A is true B is false <br> b. A is false B is true <br> c. both are true <br> d. both are false <br> ii. A problem L is NP-complete iff L is NP-hard <br> a. $L \approx N P$ <br> b. $L \varepsilon N P$ <br> c. $L \propto N P$ <br> d. $L=N P$ | 5 | $\mathrm{CO5}$ |
| Q 6 | i. The knapsack problem belongs to $\qquad$ domain of the problem <br> a. NP-complete <br> b. sorting <br> c. optimization <br> d. Linear solution <br> ii. Which of the following can traverse the state space tree only in a DFS manner? <br> a. branch and bound <br> b. dynamic programming <br> c. backtracking <br> d. greedy algorithm | 5 | CO5 |
| Instruction : Write short/brief notes |  |  |  |
| Q 7 | a. Solve the recurrence relation using recursion tree $T(n)=2 T(\sqrt{n})+1$ and $T(1)=1$ <br> b. Compute the time complexity of the following function where $n>0$ <br> int recursive(int n) \{ <br> if $(\mathrm{n}==1)$ return 1 ; <br> else return (recursive(n-1)+recursive(n-1)); <br> \} | 10 | CO1 |
| Q 8 | Derive the recurrence relations of Best, worst, and Average-case time complexities of the Quicksort algorithm. | 10 | CO2 |
| Q 9 | Find the optimal solution by using prim's minimum cost spanning of the following graph. | 10 | CO 3 |
| Q 10 | Find all possible subsets of the sum to m . Let $\mathrm{w}=\{5,7,10,12,15,18,20\}$ and $\mathrm{m}=35$ and draw the state space tree that is generated. | 10 | $\mathrm{CO4}$ |

| Q 11 | Give the formulation of knapsack problem using branch and bound through find the optimal solution using least-cost branch and bound with $\mathrm{n}=4, \mathrm{~m}=15,(\mathrm{p} 1 \ldots \mathrm{p} 4)=(15,15,17,23),(\mathrm{w} 1 \ldots \mathrm{w} 4)=(3,5,6,9)$ <br> or <br> Explain the P, NP, NP-Hard, and NP-complete classes and give the relation between them. | 10 | $\mathrm{CO5}$ |
| :---: | :---: | :---: | :---: |
| SECTION C |  |  |  |
| Instruction: Write a long answer. |  |  |  |
| Q 12 | Apply the matrix chain multiplication for $\mathrm{A} 1=5 \mathrm{X} 4, \mathrm{~A} 2=4 \mathrm{X} 6, \mathrm{~A} 3=6 \mathrm{X} 2, \mathrm{~A} 4=2 \mathrm{X} 7 . \mathrm{P} 1=5$, $\mathrm{P} 2=4, \mathrm{P} 3=6, \mathrm{P} 4=2, \mathrm{P} 5=7$. Design the algorithms for optimal parenthesization and matrix chain multiplication through analyzing the space and time complexity. <br> or <br> Apply the all pair shortest path problem for the following graph and design the algorithm for computing cost and path through analyzing the time complexity. | 20 | $\mathrm{CO4}$ |
