MBA - Oil & Gas (2011-2013)

College of Management and Economic Studies

University of Petroleum & Energy Studies, Dehradun - 248007

CERTIFICATE

This is to certify that the Dissertation entitled "Financial Performance of Acquirers – A case of Indian Oil & Gas Merger" is a bonafide record of independent research work done by Mr.

Pradeep Ramchandra Balkur (Enrollment No.: R020211061) under my guidance and submitted to University of Petroleum & Energy Studies, Dehradun in partial fulfillment for the award of the Degree of Master of Business Administration in Oil & Gas Management.

Signature:

Name: Prof. Jayanta Kumar Mohapatra

University of Petroleum & Energy Studies (UPES)

CERTIFICATE OF ORIGINALITY

I, hereby, declare that this dissertation report entitled "Financial Performance of Acquirers – A case of Indian Oil & Gas Merger" which is being submitted in partial fulfillment for the award of degree of MBA in Oil & Gas Management is the result of project carried out by me under the guidance and supervision of Prof. J.K Mohapatra.

I further declare that I or any other person has not previously submitted this project report in any other Institution/ University for any other degree/ diploma.

Pradeep Ramchandra Balkur

DECLARATION

I hereby declare that the dissertation entitled "Financial Performance of Acquirers - A

case of Indian Oil & Gas Merger " is the result of my own research work and own effort

under the guidance of Prof. Jayanta Kumar Mohapatra, College of Management and

Economics Studies, University of Petroleum & Energy Studies, Dehradun. More over this

report has been submitted to College of Management and Economics Studies, University of

Petroleum & Energy Studies, Dehradun for the partial fulfillment of my MBA program.

Signature:

Name: Pradeep Ramchandra Balkur

Reg No: R020211061

Branch: MBA (Oil & Gas)

ACKNOWLEDGEMENT

First and foremost, I would like to thank College of Management and Economics Studies, University of Petroleum & Energy Studies, Dehradun for providing me an opportunity to take up this dissertation entitled "Financial Performance of Acquirers — A case of Indian Oil & Gas Merger". I express my sincere gratitude towards my guide Prof. Jayanta Kumar Mohapatra for his constant guidance, support and encouragement towards me throughout this project. Besides, I would also like to thank all the experts involved in this dissertation work; I appreciate their effort, contribution and their valuable time towards providing valuable information. Finally, an honorable mention goes to my family and friends for their understandings and supports on me in completing this project, without their help this dissertation would not have materialistic.

Chapter-1

Introduction

In today's globalized economy, it is becoming evident that the current ways of doing business are not good enough. In order to stay competitive in tomorrow's market, organizations have to invent new ways of competing. In a world of continuous redefinition of industry boundaries and commingling of technologies, businesses have to strive for 'opportunity share' in future markets. It is sufficient to say that what is needed today is strategic clarity based on established principles. Strategic decisions such as divestments, new product launches, acquisitions, consolidations, etc., though in vogue for long, have become more relevant today than in the past, for creating additional space for the existing firms to claim additional margins in 'opportunity share'. Mergers and Acquisitions (M&A) have thus become universal tools to attain greater market share, acquire additional brands, cannibalize competing brands, realize improved infrastructure, create new synergies, capitalize on efficiencies and economies of scale, globalize in shorter spans of time, etc.

Against this world scenario, it is heartening to listen to the Indian Finance Minister saying that "consolidation is the name of the game. If two or more companies come together, we will support them and we need world class companies. We have to think global and act

local." His comments are just in consonance with what the theoreticians in finance have been often saying: M&A are the best fit strategies for quick growth and, in turn, for maximization of shareholders' wealth. Secondly, the announcement is pretty timely—with the opening of the manufacturing sector to global competition under World Trade Organization (WTO) agreements, it is essential to accomplish economies of scale in the manufacturing industry to compete with the global players.

Rationale for M&A According to Indian Industry

In a survey among Indian corporate managers across various industry sectors, in 2006, by Grant Thornton,2 it was observed that M&A are a significant form of business strategy today for Indian corporate. The two main objectives behind any-M&A transaction, for corporate were found to be:

- Improving revenues and profitability, and
- Faster growth in scale and quicker time to market

Table 1: Objectives of Indian Corporate for M&A

Objective Behind the M&A Transaction Responses (in %)

To improve revenues and Profitability------33%

- Faster growth in scale and quicker time to market------ 28%
- Acquisition of new technology or competence----- 22%
- To eliminate competition and increase market share ----11%
- Tax shields and Investment savings -----3%
- Any other reason----- 3%

Merger as an Efficiency Enhancing Measure

Mergers can lead to increased efficiencies. Such efficiencies and cost-saving can flow from economies of scale to scope possible in larger post-merger operations, with greater control over key inputs, product rationalization, combining marketing, advertisement and distribution, and even cutting down overlapping research and development. On the other hand, in cases of vertical mergers, the benefits would accrue from better coordination of facilities both backward and forward, reduction in inventory levels and higher market power of the combined firms. Operating economies in the form of reduction or elimination of certain overhead expenses may also arise in cases of conglomerate mergers.

The net result of realizing economies of scale would be a decrease in the cost of production; but, if the scale of operation or size of the merged firm become too large and unwieldy, then

'diseconomies of scale' would also arise and the unit cost of production would show a rising trend.

Merger as a Mechanism for Enhancing Growth and Diversification

Mergers/amalgamations of two or more firms have been used as dominant business strategy to seek rapid growth and diversification. A merger improves the competitive position of the merged firm as it can command increased market share. It also offers a special advantage because it enables the merged firm to leap several stages in the process of expansion. In a saturated market, simultaneous expansion and replacement through mergers/takeover is more desirable than creating additional capacities through expansion.

A merger proposal has a very high growth appeal and its desirability should always be judged in the ultimate analysis in terms of its contribution to the market price of shares o the merged firms. The merged firms can also seek reduction in the risk level through diversification of the business operations. The extent to which risk is reduced, however, depends on the correlation between the earning of the merging (combining) firms. A negative correlation between the combining firms always brings great reduction in risk, whereas a positive correlation leads to less reduction in risk.

Merger as Driven by Macroeconomic Changes

M&A are undertaken to compensate for instabilities such as wide fluctuation in demand and product mix, excess capacities related to slow sales growth and declining profit margins, and technological shocks. It is also argued that the development of an active market for corporate control may encourage managers to 'empire build', not only to increase their monopoly power, but also to progressively shield themselves from takeovers by becoming larger. What is referred to here is the defensive tactics of firms in a developing country like India. While there are specific firm motives for undertaking M&A, there are also economic forces that have acted to encourage the CB M&A, such as the economic integration of the European Union (EU) and NAFTA, represented by the creation of a common market (Caves, 1991; and UNCTAD, 1997).

Merger as Driven by Financial Motives

Mergers of two or more firms bring about the following financial advantages for the merged firm:

Relief Under the Income Tax Act: Under Section 72A of the Indian Income Tax Act, 1962, carry forward and setting off of accumulated losses and unabsorbed depreciation of the

amalgamating company are allowed against future profits of the amalgamated company in order to encourage revival of sick units.

Higher Debt Capacity: The merged firms would enjoy higher debt capacity because the benefits of combination of two or more firms provide greater stability to the earning level. This is an important consideration for the lenders since the possibility of default in repayment of loans and interests is reduced to a greater extent. A higher debt capacity, if utilized, would mean greater tax advantage for the merged firms, leading to a higher value of the firm.

Reduction of Floatation Costs: Whenever the merged firm raises funds for the market through public issues of shares or debentures, the floatation costs can be reduced when compared to the similar amount being raised independently by the merging firms; such reduction in floatation costs represents a real benefit to the merged firm.

Terminologies

There are various strategic and financial objectives that influence mergers and acquisitions.

Two organizations with often different corporate personalities, cultures and value systems are bought together. The terms 'mergers' and 'acquisitions' are often used interchangeably.

In lay parlance, both are viewed as the same. However, academics have pointed out a few differences that help determine whether a particular activity is a merger or an acquisition.

Merger

A particular activity is called a merger when corporations come together to combine and share their resources to achieve common objectives. In a merger, both firms combine to form a third entity and the owners of both the combining firms remain as joint owners of the new entity (Sudarsanam, 1995)

Horizontal Merger

Mergers of corporations in similar or related product lines are termed as horizontal mergers. These mergers lead to elimination of a competitor, leading to an increase in the market share of the acquirer and degree of concentration of the industry (M&A, Milford Green, 1990) In addition to increasing the market power, horizontal mergers often tend to be used to protect the dominance of an existing firm. Horizontal mergers also improve the efficiency and economies of scale of the acquiring firm (Lipczynski, Wilson, 2004)

Vertical Merger

A vertical merger is the coming together of companies at different stages or levels of the same product or service. Generally the main objective of such mergers is to ensure the

a partnership. This makes it difficult for competing companies to survive due to the advantages of the merger. The distributor need not pay additional costs to the supplier as they both are now part of the same entity (learnmergers.com). Such increased synergies make the business extremely profitable and drive out competition.

Conglomerate Merger

Conglomerate mergers occur between firms that are unrelated by value chain or peer competition. Conglomerates are formed with the belief that one central office would have the know-how or knowledge and expertise to allocate capital and run the businesses better than how they would be run independently (Robert Bruner, 2004)The main motive behind the formation of a conglomerate is risk diversification as the successful performers balance the badly performing subsidiaries of the group (Brian Coyle, 2000)

Conglomerate mergers can also be explained as a merger between companies which are not competitors and also do not have a buyer seller relationship. The general observation has been that such conglomerate mergers are not very successful. Where only a few conglomerates like General Electronics (GE) have been successful, most others have failed (Patrick Gaughan, 2007)

Acquisition

An acquisition could be explained as event where a company takes a controlling ownership interest in another firm, a legal subsidiary of another firm, or selected assets of another firm. This may involve the purchase of another firm's assets or stock (Donald M. DePamphilis,2008)

Acquiring all the assets of the selling firm will avoid the potential problem of having minority shareholders as opposed to acquisition of stock. However the costs involved in transferring the assets are generally very high. There is another term, 'takeover' which is often used to describe different activities.

Takeover

Takeover is slightly different than acquisition however the meaning of the later remaining the same. When the acquisition is forced in nature and without the will of the target company's management it is known as a takeover. Takeover normally undergoes the process whereby the acquiring company directly approaches the minority shareholders through an open tender offer to purchase their shares without the consent of the target company's management. In mergers and acquisitions scenario the terms mergers,

acquisitions, takeover, consolidation and amalgamation are used interchangeably (Source: Chandra, 2001)

Friendly takeover

A "friendly takeover" is an acquisition which is approved by the management. Before a bidder makes an offer for another company, it usually first informs the company's board of directors. In an ideal world, if the board feels that accepting the offer serves the shareholders better than rejecting it, it recommends the offer be accepted by the shareholders.

In a private company, because the shareholders and the board are usually the same people or closely connected with one another private acquisitions are usually friendly. If the shareholders agree to sell the company, then the board is usually of the same mind or sufficiently under the orders of the equity shareholders to cooperate with the bidder. This point is not relevant to the UK concept of takeovers, which always involve the acquisition of a public company.

Hostile takeovers

A "hostile takeover" allows a suitor to take over a target company whose management is unwilling to agree to a merger or takeover. A takeover is considered "hostile" if the target

company's board rejects the offer, but the bidder continues to pursue it, or the bidder makes the offer directly after having announced its firm intention to make an offer.

Development of the hostile tender is attributed to Louis Wolfson.

A hostile takeover can be conducted in several ways. A tender offer can be made where the acquiring company makes a public offer at a fixed price above the current market price. Tender offers in the United States are regulated by the Williams Act. An acquiring company can also engage in a proxy fight, whereby it tries to persuade enough shareholders, usually a simple majority, to replace the management with a new one which will approve the takeover. Another method involves quietly purchasing enough stock on the open market, known as a "creeping tender offer", to affect a change in management. In all of these ways, management resists the acquisition, but it is carried out anyway.

The main consequence of a bid being considered hostile is practical rather than legal. If the board of the target cooperates, the bidder can conduct extensive due diligence into the affairs of the target company, providing the bidder with a comprehensive analysis of the target company's finances. In contrast, a hostile bidder will only have more limited, publicly available information about the target company available, rendering the bidder vulnerable to hidden risks regarding the target company's finances. An additional problem is that takeovers often require loans provided by banks in order to service the offer, but

banks are often less willing to back a hostile bidder because of the relative lack of target information which is available to them.

Reverse takeovers

A "reverse takeover" is a type of takeover where a private company acquires a public company. This is usually done at the instigation of the larger, private company, the purpose being for the private company to effectively float itself while avoiding some of the expense and time involved in a conventional IPO. However, in the UK under AIM rules, a reverse take-over is an acquisition or acquisitions in a twelve-month period which for an AIM company would: exceed 100% in any of the class tests; or result in a fundamental change in its business, board or voting control; or in the case of an investing company, depart substantially from the investing strategy stated in its admission document or, where no admission document was produced on admission, depart substantially from the investing strategy stated in its pre-admission announcement or, depart substantially from the investing strategy stated.

An individual or organization, sometimes known as corporate raider, can purchase a large fraction of the company's stock and, in doing so, get enough votes to replace the board of directors and the CEO. With a new agreeable management team, the stock is a much more

attractive investment, which would likely result in a price rise and a profit for the corporate raider and the other shareholders.

Back flip takeovers

A "back flip takeover" is any sort of takeover in which the acquiring company turns itself into a subsidiary of the purchased company. This type of takeover can occur when a larger but less well-known company purchases a struggling company with a very well-known brand.

Net Operating Profit After Tax (NOPAT)

NOPAT is an alternative indicator for measuring the operating efficiency of leveraged companies. It is an estimate of what a company would earn if it did not have any debt. It is calculated as:

NOPAT = Net Operating Profit After Tax / Sales

Return on Assets (ROA)

ROA measures a company's earnings in relation to all of the resources it has employed. It tells us what earnings were generated from the invested capital (assets). The assets of a company comprise both debt and equity. Both these types of financing are used to fund

operations of a company. The ROA gives investors an idea as to how effectively a company is converting the money it has into net income.

ROA = EBIT / Total Assets

Return on Capital Employed (ROCE)

ROCE is a significant measure of the return that a company is realizing from its capital, calculated by the profit before interest and tax divided by the difference between total assets and current liabilities. It is calculated as:

ROCE = EBIT / Net Worth + Long-Term Debt

Earnings Per Share (EPS)

EPS, as the name indicates, is per share earnings of a company for a given period. This is the most important factor in the fundamental analysis of a stock. It is calculated as:

EPS = PAT / The Number of Equity Shares

Economic Value Added (EVA)

EVA attempts to measure the 'value' created by an organization for its shareholder during an accounting period. It is defined as the excess of a company's after tax net operating profit over the required minimum rate of return that the investors and lenders could get by

investing in other securities of comparable risk. For the purpose of this study, EVA has been defined as:

EVA = NOPAT - Cost of Capital x Capital Employed

Chapter-2

Merger in Oil and Gas Industry

Mergers and acquisitions have become major strategic levers for oil and gas companies to strengthen their technical and financial resource base and reduce cost structures. However, oil and gas companies have found that expected synergies from mergers are difficult to achieve: Merged organizations often operate in a cumbersome fashion, with poorly defined work processes and inadequate understanding of how the organization matrix should function Technical and administrative functions remain fragmented, resulting in limited information sharing and poor integration of functional expertise into operational decisions.

Like other players in the power/energy sector, oil and gas companies have seen benefits in mergers and acquisitions. Both current needs and current operations greatly exceed historical levels, and consolidating both capital and human resources makes sense.

Mergers and acquisitions in the global oil and gas industry expected to increase in 2012. Executives from the global oil and gas industry expect increased levels of consolidation, with 57% of respondents anticipating that there will be either a 'significant increase' or an increase' in mergers and acquisition (M&A) activities over the next 12 months. M&A

activity is expected to increase as a result of high growth in emerging markets and overcapacity in developed regions, and the need to develop new efficient technology solutions as a long-term priority for companies is also expected to drive M&A activities Additionally, global oil and gas industry buyer respondents reveal that they will increase capital expenditure towards 'machinery and equipment purchase', 'new product development' and 'IT infrastructure and development' over the next 12 months.

economic crisis, as evident by the steady rise in investments and rising prices of crude oil. Increasing demand for electricity, growing need for feedstock in petrochemical industries, and rising consumption of transportation fuel are some of the factors contributing to this recovery Growth in the market is further spurred by extraordinary demand originate from developing countries including India, China, Latin America and the Middle East. Demand for oil and natural gas is influenced by factors such as change in consumer behavior, government policies, and weather conditions. While the global demand for oil and gas continues to rise the supply scenario has been volatile in recent years, largely due to the uncertain conditions prevailing in the Middle East.

A Brief about Some of the Sample Units

Bharat Petroleum Corporation Limited

Bharat Petroleum Corporation Limited (BPCL) is an Indian state-controlled oil and gas company headquartered in Mumbai, Maharashtra. BPCL has been ranked 225th in the Fortune Global 500 rankings of the world's biggest corporations for the year 2012.

In 1989 during vast industrial development, an important player in the South Asian market was the Burmah Oil Company. Though incorporated in Scotland in 1886, the company grew out of the enterprises of the Chef Rohit Oil Company, which had been formed in 1871 to refine crude oil produced from primitive hand dug wells in Upper Burma.

In 1928, Asiatic Petroleum Company (India) started cooperation with Burma oil company.

This alliance led to the formation of Burmah-Shell Oil Storage and Distributing Company of India Limited. Burmah Shell began its operations with import and marketing of Kerosene.

On 24 January 1976, the Burmah Shell was taken over by the Government of India to form Bharat Refineries Limited. On 1 August 1977, it was renamed Bharat Petroleum Corporation Limited. It was also the first refinery to process newly found indigenous crude Bombay High.

In 2003, following a petition by the Centre for Public Interest Litigation, the Supreme Court restrained the Central government from privatizing Hindustan Petroleum and Bharat Petroleum without the approval of Parliament. As counsel for the CPIL, Rajinder Sachar and Prashant Bhushan said that the only way to disinvest in the companies would be to repeal : or amend the Acts by which they were nationalized in the 1970s. As a result, the government would need a majority in both houses to push through any privatization

Oil and Natural Gas Corporation Limited

Oil and Natural Gas Corporation Limited (ONGC) (NSE: ONGC, BSE: 500312) is an Indian multinational oil and gas company headquartered in Dehradun, India. It is one of the largest Asia-based oil and gas exploration and production companies, and produces around 72% of India's crude oil (equivalent to around 30% of the country's total demand) and around 48% of its natural gas. It is one of the largest publicly traded companies by market capitalization in India.ONGC has been ranked 357th in the Fortune Global 500 list of the world's biggest corporations for the year 2012. It is also among the Top 250 Global Energy Company by Platts.

ONGC was founded on 14 August 1956 by the Indian state, which currently holds a 69.23% equity stake. It is involved in exploring for and exploiting hydrocarbons in 26 sedimentary

basins of India, and owns and operates over 11,000 kilometers of pipelines in the country.

Its international subsidiary ONGC Videsh currently has projects in 15 countries.

During the pre-independence period, the Assam Oil Company in the northeastern and Attock Oil company in northwestern part of the undivided India were the only oil companies producing oil in the country, with minimal exploration input. The major part of Indian sedimentary basins was deemed to be unfit for development of oil and gas resources.

After independence, the national Government realized the importance oil and gas for rapid industrial development and its strategic role in defense. Consequently, while framing the Industrial Policy Statement of 1948, the development of petroleum industry in the country was considered to be of utmost necessity.

Until 1955, private oil companies mainly carried out exploration of hydrocarbon resources of India. In Assam, the Assam Oil Company was producing oil at Digboi (discovered in 1889) and Oil India Ltd. (a 50% joint venture between Government of India and Burmah Oil Company) was engaged in developing two newly discovered large fields Naharkatiya and Moraan in Assam. In West Bengal, the Indo-Stanvac Petroleum project (a joint venture between Government of India and Standard Vacuum Oil Company of USA) was engaged in

exploration work. The vast sedimentary tract in other parts of India and adjoining offshore remained largely unexplored.

In 1955, Government of India decided to develop the oil and natural gas resources in the various regions of the country as part of the Public Sector development. With this objective, an Oil and Natural Gas Directorate was set up towards the end of 1955, as a subordinate office under the then Ministry of Natural Resources and Scientific Research. The department was constituted with a nucleus of geoscientists from the Geological survey of India.

Indian Oil Corporation Limited and IBP Merger

IOC (Indian Oil Corporation) came into being in the year 1959. IOC operates mainly in the downstream segment which involves refining and marketing of oil and petrol based products. It operates into aviation turbine fuel, petrol spirit, high speed diesel and liquefied petroleum gas. It also has three subsidiaries CPCL, BRPL and IOBL (www.iocl.com)

IBP is one of the oldest companies in the oil and gas sector in India which was established in the year 1909. The company is Indo-Burma Petroleum based company operating in India. IBP is mainly engaged into the storage, distribution and marketing of petrol based products in India. It is mainly engaged into industrial and cryogenic containers.

Indian Oil Corporation and IBP Merger took place in 2007 with a share swap ratio of 1.25:1. This means that for every IOC shareholders would get 125 shares for every 100 IBP shares held (Hindu Business Line, 2007).

22

Chapter-3

Literature Review

B Lev and G Mandelker (1970) examine the profitability of mergers along such aspects as risk, growth, capital structure, income tax savings, earnings per share etc. The conclusion drawn is that the long run profitability of acquiring firms is probably somewhat higher than that of comparable non-merging firms. Krishna Palepu (1985) finds that there is no significant cross-sectional difference between the 1) profitability of firms with predominantly related and unrelated diversification and 2) Profitability of firms with high and low total diversification. Moreover, the study finds that the superior profitability growth of related diversifiers is significantly greater than that of unrelated diversifiers. Herman and Lowenstein (1988) examined the post merger performance of a sample of hostile acquisitions between 1975 and 1983. The study by Paul M Healy and Krishna G Palepu (1992) examines the post merger cash flow performance of acquiring and target firms and explores the sources of merger induced changes in cash flow performance based on 50 largest US mergers between 1979 and mid 1984. The study finds that merged firms show significant improvements in asset productivity relative to their industries, leading to higher operating cash flow returns. These improvements were particularly strong for transactions involving firms in overlapping business. The study further suggests that post

merger cash flow improvements do not come at the expense of long term performance since sample firms maintain their capital expenditure and R&D rates relative to their industries after the merger. The study also found strong positive relation between post merger increases in operating cash flows and abnormal stock returns at merger announcements indicating that expectations of economic improvements explain a significant portion of the equity revaluation of the merging firms. Cornett and Tehranian (1992) examine the post acquisition performance of large bank merger between 1982 and 1987. The results of their study indicate better performance for merged banks due to the improvements in ability to attract loans and deposits, in employee productivity and in profitable asset growth. Further, the study finds a significant correlation between announcements period abnormal return and the various performance measures indicating that the market participants are able to identify in advance the improved performance associated with bank acquisitions. Switzer (1996) examined the change in operating performance of merged firms using a sample of 324 combinations, which occurred between 1967 and 1987. The results indicated that the performance of the Decision, Vol. 34, No.1, January - June, 2007 Mergers and Corporate Performance in India: An Empirical Study 123 merged following their combinations and also the results are not sensitive to factors such as offer size, industry relatedness between the bidder's and target's businesses or bidder's leverage The study also found positive association between the abnormal

revaluation of the firms involved around the merger and changes in operating performance observed.

Accounting performance

The results of various operating performance studies do not give a consensual view of the effects of acquisitions. While some studies report gains, e.g., Healy et al. (1997), Parrino and Harris (1999), and Powell and Stark (2005), some showed losses to the acquiring firms, e.g., Hogarty (1978), Clark and Ofek (1994), Pawaskar (2001), and Sharma and Ho (2002) and others report mixed resultse.g., Neely and Rochester (1987), and Ghosh (2001). The issue of operating gains from mergers is not tested much in India. Kaveri (1986) compares post-merger performance of merging companies with pre-merger performance on a case-by-case basis. Kumar and Parchure (1990) offers a general introduction to mergers and discuss their accounting framework. Pawaskar (2001) took a sample of 36 merged companies from 1992 to 1995 and calculated operating gains for three pre-merger and three post-merger years. Kumar and Rajib (2007) analyzed the financial and product market characteristics for 227 acquirer and 125 target firms over a period 1993-2004

Chapter-4

Research Methodology

Data: Liberalization gave a boost to the activity of M&A in India. So, the focus was upon a time period when M&A gained significance in the Indian economy. The time period of the study is restricted to 2009 because three years post-merger data is required for the analysis.

The list of merged companies was identified first from the Bombay Stock Exchange's (BSE) publication of list of mergers and then a manual compilation was performed from the monthly Economic Intelligence Services (EIS) publications of Centre for Monitoring Indian Economy (CMIE). From the compiled list of merged firms, sample firms were chosen on the basis of the following criteria:

- Target size should not be less than 10% of the acquirer size
- Clean period data should be available 2 years post and pre merger
- The acquirer should be a listed company, the stock price should be available in the BSE or NSE
- Cross border acquisition are not taken
- Cost of the acquisition should be available

Acquisitions less than 50 million are not taken

Methods: The methods that would be used in studying the performance of the Merged and acquiring company are:

- Event study Method Used
- Market model compared with S&P Index
- Daily Abnormal Return
- Return 6 Months before & After
- Cumulative Abnormal return to find out the total gain around merger of 1 year
- Total No of cases 10

The Model Used

Studies of ARs provide a basis for examining the issue of whether value is enhanced by mergers or not. The study analyzes share price performance using the market model and the market adjusted model.

The Market's reaction to mergers bid is measured using daily stock return data to compute excess stockholders returns. These excess returns are a measure of stockholder's return

from the new information available to the market. The daily excess return for the security is estimated by the market model method and the market adjusted return method, as explained below.

Chapter 5

Research Analysis & Scope

The Market Model Method

XR = Rt - E(Rt)

Where t = Day relative to the event;

XRt = Excess return on the security for day t;

Rt = Actual return on the security for day t; and

E(Rt) = Expected rate of return on the security for day t.

The model parameters were estimated by regressing daily stock return on the market index (Sensex) Over the estimation period. The market model is given by

 $Rt = a + bRmt + e \, t$, where Rmt is the return on sensex for day t and B - measures sensitivity of the firm to the market. This is a measure of risk and E, is a stastical error term where Et = 0. Thus the predicted return for the firm in the event period is the return given by the market model on that day using these estimates. The market model method is

widely used since it takes explicit account of both risks associated with the market and the mean returns.

The Market Adjusted Return Method

The predicted return for a firm for a day in the event period is represented by the return on the market index (BSE Sensex)

Rt = Rmt

Where Rt is the expected return and Rmt = Market index return

The Merger event has been taken as the outcome date - from the stock exchange.

Case 1: - Oil & Natural Gas Corpn. Ltd. - MRPL Takeover - Events Date - 2 Aug 2002

Chapter 6

Conclusions

From the analysis of the above cases of Mergers of the sample Units it can be seen that the Merger and Acquisition strategy proved beneficial, profitable for most of the oil and gas companies. Thus we can say that Average return to shareholder is around 20-30% for an investment during 1 year(pre & post)

Theories of Merger Motives

Merger motives have triggered far less theoretical efforts than merger consequences. But still the field has brought forth a total of seven different theories. At the most general level those theories that regard merger consequences as the moving cause behind mergers can be distinguished from those that do not. Gort's (1969) disturbance theory and those approaches that view mergers as process outcomes belong in the second category. In the first category most theories focus on shareholders' interests while one group focuses on managers' interests and their deviations from shareholder value maximization

Efficiency theory

This theory views mergers as being planned and executed to achieve synergies. In general, three types of synergies can be distinguished.

1. Financial synergies result in lower costs of capital. One way to achieve this is by

lowering the systematic risk of a company's investment portfolio by investing in unrelated businesses. Another way is increasing the company's size, which may give it access to cheaper capital. A third way is establishing an internal capital market. An internal market may operate on superior information and therefore allocate capital more efficiently.

- 2. Operational synergies can stem from com-bining operations of hitherto separate units (for example a joint sales force) or from knowledge transfers (Porter, 1985). Both kinds of operational synergies may lower the cost of the involved business units or may enable the company to offer unique products and services. These potential advantages have to be weighed against the cost of combining or transferring assets.
- 3. Managerial synergies are realized when the bidder's managers possess superior planning and monitoring abilities that benefit the target's performance. A sideline to this argument are the positive motivation effects ascribed to LBOs.

Monopoly theory

This explanation views mergers as being planned and executed to achieve market power.

This cannot only occur in horizontal acquisitions. Conglomerate acquisitions may allow a firm to embark on the following activities:

. The firm can cross-subsidize products. Pro- fits from the position in one market are used, for example, to sustain a fight for market share in another market. Philip Morris allegedly did this after acquiring Miller. The firm can aim at deterring

potential entrants from its markets. One possible way of achieving this is concentric acquisition by a market leader. Deterrence of potential competition is even harder to evaluate than the activities mentioned in the previous paragraph. The elusive character of potential competition seems to be the reason for its ever-changing fate in antitrust (Steiner, 1975)

Valuation theory

This approach argues that mergers are planned and executed by managers who have better information about the target's value than the stock market (Steiner, 1975; Holderness and Sheehan, 1985; Ravenscraft and Scherer, 1987).

Bidders' managers may have unique information about possible advantages to be derived from combining the target's businesses with their own. Or they may have detected an undervalued company that only waits to be sold in pieces. Similarly, managers proposing an LBO may possess unique information about what they can do with a business once they are no longer under the influence of a corporate headquarters.

Disturbance theory

In Gort's (1969) theory merger waves are caused by economic disturbances. They cause changes in individual expectations and increase the general level of uncertainty. Thereby, they change the ordering of individual expectations. Previous non-owners of assets now place a higher value on these assets than their owners, and vice-versa. The result is a merger wave. This theory is not considered further for three reasons. First, it does not discuss the institutional framework for mergers. But especially in a macro-

level explanation this has to be included to explain, for example, why the oil crisis in 973/74 did not trigger a merger wave like the one in the late 1960s that was not connected to any major economic disturbance.

We have seen that post Merger the Profitability of most of the companies has increased. So it can be said that the Efficiency Theory holds good for Mergers and Acquisition in Oil and Gas Industry in India. It can be inferred that the profitability of the companies arises post Merger due to:

Consolidation, Wealth Transfer, Synergy, More control over Resources
