Name:

**Enrolment No:** 

## UNIVERSITY OF PETROLEUM AND ENERGY STUDIES End Semester Examination, December 2022

**SECTION A** 

**Course: Probability and Statistics for Engineers** 

Program: B.Tech. (CSE)(Hons.)

Course Code: CSEG 2036P

Semester: III Time: 03 hrs.

Max. Marks: 100

## Instructions: Attempt all the questions. Q. No. 11 has internal choice.

	(5Qx4M=20Marks)		
S. N.		Marks	СО
Q 1	The probabilities that students A, B, C, and D solve a problem are 1/3, 2/5, 1/5, and 1/4, respectively. If all of them try to solve the problem, find the probability that the problem is solved.	4	CO1
Q 2	Suppose that the number of cars $X$ that pass through a car wash between 4:00P.M. and 5:00 P.M. on any sunny Friday has the following probability distribution: $ \frac{x}{P(X=x)} = \frac{1}{12} $	4	CO2
Q 3	Determine the value $c$ so that the following function can serve as a probability distribution of the discrete random variable $X$ : $f(x) = c \ (x^2 + 4), \text{ for } x = 0, 1, 2, 3;$	4	CO2
Q 4	The probability of a man hitting a target is 1/3. How many times must he try so that the probability of hitting the target at least once is more than 90%?	4	CO3
Q 5	Find the probability that a person flipping a coin gets the third head on the seventh flip.	4	CO3

SECTION B								
(4Qx10M= 40 Marks)								
Q 6	The joint probability mass function of a bivariate random variable $(X, Y)$ is given by $P(X = x, Y = y) = \begin{cases} k(2x + y) & x = 1, 2 \text{ and } y = 1, 2 \\ 0, & otherwise \end{cases}$ where $k$ is a constant. Find (a) Value of $k$ and (b) $P(X = x \mid Y = 2)$ .	10	CO2					
Q 7								
	$f(x) = \begin{cases} 6x(1-x) & 0 \le x \le 1\\ 0, & otherwise \end{cases}$ Determine the value of $b$ such that $P(X < b) = P(X > b)$ .	10	CO3					
Q 8	<ul> <li>(a) State and explain the expression for negative binomial distribution.</li> <li>(b) The average number of phone calls per minute coming into a switch board between 2 pm and 4 pm is 2.5. Determine the probability that during one particular minute there will be (i) 4 or fewer calls (ii) more than 6 calls.</li> </ul>							
Q 9	Q 9 A research scientist reports that mice will live an average of 40 months when their diets are sharply restricted and then enriched with vitamins and proteins. Assuming that the lifetimes of such mice are normally distributed with a standard deviation of 6.3 months, find the probability that a given mouse will live  (a) less than 28 months;  (b) between 37 and 49 months.							
	SECTION-C (2Qx20M=40 Marks)							
Q 10								
Q 11	A study was made on the amount of converted sugar in a certain process at various temperatures. The data were coded and recorded as follows:	20	CO5					

		Temperature, $x$	Converted Sugar, y			
		1.0	8.1			
		1.1	7.8			
		1.2	8.5			
		1.3	9.8			
		1.4	9.5			
		1.5	8.9			
		1.6	8.6			
		1.7	10.2			
		1.8	9.3			
		1.9	9.2			
		2.0	10.5			
	(a) Estimate the line	ear regression line.				
		_	rted sugar produced when	the coded		
	temperature is 1		noo sugui produced when			
	-	ls versus temperature	<b>).</b>			
		•	OR			
	Explain the followi	ng:				
	(a) Classification ar	nd Clustering.				
	(b) Decision Trees.				20	CO5
	(c) ANOVA					
	(d) Uniform Distrib	vution				
1	(a) Chilomi Distric	uuon			1
