UNIVERSITY OF PETROLEUM AND ENERGY STUDIES

End Semester Examination, May-2022

Programme Name: B Tech (Applied Petroleum Engineering –Upstream)

Course Name: Drilling Engineering and Well Construction

Time: 03 hrs

Course Code: PEAU 2008

Semester: IV

Max. Marks: 100

Instructions:

- All questions are compulsory
- Assume appropriate missing data, if any.
- Filled kill sheet to be attached with answer sheet if you are attempting this question.
- However, internal choice has been provided. You have to attempt only one of the alternatives in all such questions.

SECTION A (5Qx4M=20Marks)

S. No.		Marks	CO
Q1	Define Duplex and triplex pumps?	04	CO1
Q2	The three basic forces which the casing experienced during drilling?	04	CO1
Q3	Optimizing weight on bit (WOB) is an essential part of drilling to ensure that the well deepens as drilling moves forward. Justify.	04	CO3
Q4	Distinguish between MWD & LWD.	04	CO4
Q5	Define KOP, inclination angle and azimuth angle?	04	CO4

SECTION B (4Qx10M=40 Marks)

Q 6	List and describe the functions of each of the component parts of the hoisting system on a conventional land drilling rig?	10	CO2
Q 7	a) Explain in detail about different types of drilling fluids? b) Mention any 6 properties of a drilling fluid and explain their importance?	5+5	CO3
Q 8	It was decided to reduce the mud weight from 11.4 ppg while tripping in the well of 9,780 ft TVD. String was run to 5,700 ft and original mud was displaced by 10.8 ppg mud. a. What will be the bottom hole pressure now? b. When string was run down to bottom the entire well was displaced by	5+5	CO4

	10.6 ppg muds. Calculate the bottom hole pressure in static condition.		
Q 9	<p>Differentiate between single stage cementing operation with multi-stage cementing operation. Q 10

A) Designing a Deviated Well. It has been decided to sidetrack a well from 1500 ft. The sidetrack will be a build and hold profile with the following specifications:

Target Depth	: 10000 ft.
Horizontal departure	: 3500 ft.
Build up Rate	: 1.5° per 100 ft.

Calculate the following:

- a. the drift angle of the well.
- b. the TVD and horizontal deviation at the end of the buildup section.
- c. the total measured depth to the target

B) Discuss the advantages of Rotary steerable system over mud motor systems

Q 11

The 13 3/8" casing string of a well is to be cemented using class 'G' cement. Calculate the following for two stage cementing calculation:

- a) The required number of sacks of cement for a 1st stage of 700 ft. and a 2nd stage of 500 ft.(Allow 20% excess in open hole)
- b) The volume of mixwater required for each stage.
- c) The total hydrostatic pressure exerted at the bottom of each stage of cement (assume a 10 ppg mud is in the well when cementing)
- d) The displacement volume for each stage.
