| UNIVERSITY OF PETROLEUM AND ENERGY STUDIES End Semester Examination, May 2022 |  |  |  |
| Course: Strength of Materials Semester: IV <br> Program: B. Tech ASE Time :03 h <br> Course Code: MECH 2012 Max. Marks: <br>   <br> Instructions: i) Assume any suitable value for missing data  <br> ii) Q1-Q3 are True/False  |  |  |  |
|  |  |  |  |
| $\begin{gathered} \text { SECTION A } \\ \text { (5Qx4M=20Marks) } \end{gathered}$ |  |  |  |
| S. No. |  | Marks | CO |
| Q 1 | a) Shear stress is zero at neutral axis (2 M) <br> b) Strain is material property while stress not ( 2 M ) | 4 | CO1 |
| Q2. | a) If bar is subjected to only axial loads, then shear stress is zero for any planes passing through a point. (2M) <br> b) Stiffness of material is independent of its geometric properties. (2M) | 4 | CO1 |
| Q3. | a) Point of contra-flexure is the position where shear force changes the sign. ( 2 M ) <br> b) An isotropic material has same properties at all points in a materials. (2M) | 4 | CO1 |
| Q4. | Draw the shear force and bending moment diagram for the beam below. | 4 | CO 2 |
| Q5. | An aluminum bar of $\mathrm{E}=70 \mathrm{GPa}$, diameter 20 mm is stretched by an axial forces P , causing its diameter to decrease by 0.022 mm . The load P is approximately? | 4 | CO2 |
| $\begin{gathered} \text { SECTION B } \\ (4 \mathrm{Qx} 10 \mathrm{M}=40 \text { Marks }) \end{gathered}$ |  |  |  |
| Q 6. | Steel railroad rails 10 m long are laid with end-to-end clearance of 3 mm at a temperature of $15^{\circ} \mathrm{C}$. <br> (a) At what temperature will the rails just come in contact? <br> (b) What stress would be induced in the rails at that temperature if there were no initial clearance? Use $\alpha=11.7 \times 10^{-6} /{ }^{\circ} \mathrm{C}$ and $\mathrm{E}=200 \mathrm{GPa}$. | 10 | CO3 |
| Q7. | A cantile ver beam is of length 1.5 m , loaded by a concentrated force $P$ at its tip as shown in Fig. below and is of circular cross section ( $R=100 \mathrm{~mm}$ ), having two symmetrically placed longitudinal holes as indicated. The material is titanium alloy, having an allowable working stress in bending of 600 MPa . Determine the maximum allowable value of the vertical force $P$. | 10 | CO 2 |

|  |  |  |  |
| :---: | :---: | :---: | :---: |
| Q8. | A solid brass bar of diameter $d=30 \mathrm{~mm}$ is subjected to torques $T_{1}$, as shown in part a of the figure. The allowable shear stress in the brass is 80 MPa . <br> (a) What is the maximum permissible value of the torques $T_{1}$ ? ( 4 M ) <br> (b) If a hole of diameter 15 mm is drilled longitudinally through the bar, as shown in part $b$ of the figure, what is the maximum permissible value of the torques $T_{2}$ ? (3M) <br> (c) What is the percent decrease in torque and the percent decrease in weight due to the hole? (3M) <br> (a) | 10 | CO 2 |
| Q9. | A steel spherical tank of diameter 1.2 m and wall thickness 50 mm contains compressed air at a pressure of 17 MPa . The tank is constructed of two hemispheres joined by a welded seam (see figure). <br> (a) Estimate the the tensile load $f$ ( N per mm of length of weld) carried by the weld? ( 4 M ) <br> (b) Determine the maximum shear stress $\tau_{\text {max }}$ in the wall of the tank? (3M) <br> (c) Calculate the maximum normal strain $\varepsilon$ in the wall? (3M) <br> (For steel, assume $\mathrm{E}=200 \mathrm{GPA}$, Poisson ratio $=0.3$.) | 10 | $\mathrm{CO5}$ |
|  | $\begin{gathered} \text { SECTION-C } \\ (2 Q \times 20 \mathrm{M}=40 \text { Marks }) \end{gathered}$ |  |  |
| Q10. |  |  |  |

|  | Draw the shear force and bending moment diagram of the beam shown below. If the beam is of square cross-section of side $a=10 \mathrm{~mm}$, and $\mathrm{E}=110 \mathrm{GPa}$. <br> a) Determine the magnitude of maximum shear force and bending moment. (6M) <br> b) Determine the maximum and minimum bending stress in beam. (7M) <br> c) Determine the maximum shear stress in the beam. (7M) <br> OR <br> Draw the shear force and bending moment diagram of the beam shown below. If the beam is of square cross-section of side $a=10 \mathrm{~mm}, \mathrm{E}=110 \mathrm{GPa}$. <br> a) Determine the magnitude of maximum shear force and bending moment. (6M) <br> b) Determine the maximum and minimum bending stress in beam. ( 7 M ) <br> c) Determine the maximum shear stress in the beam. (7M) | 20 | CO3 |
| :---: | :---: | :---: | :---: |
| Q11. | Apply the Macaulay's method, determine the deflection equation of the beam, if $\mathrm{M}=100 \mathrm{kNm}, \mathrm{a}=10 \mathrm{~m}, \mathrm{P}=50 \mathrm{kN}$ and $\mathrm{w}=10 \mathrm{kN} / \mathrm{m}$. Determine the deflection and slope of the beam at the tip of the beam in terms of flexural rigidity (EI). | 20 | CO4 |
