| Name: <br> Enrolment No: |  |  |  |
| :---: | :---: | :---: | :---: |
| Course: Finite Element Analysis Semester : $\mathbf{6}^{\text {th }}$ <br> Program: B.Tech Mechanical Time $: 03 \mathrm{hrs}$ <br> Course Code: MECH4023P Max. Marks: $\mathbf{1 0 0}$ <br>   <br> Instructions: Attempt all questions. Assume any data if required.  |  |  |  |
| $\begin{gathered} \text { SECTION A } \\ \text { (5Qx4M=20Marks) } \end{gathered}$ |  |  |  |
| S. No. |  | Marks | CO |
| Q 1 | Explain the difference between finite element and finite difference method. | 4 | CO1 |
| Q 2 | Explain the significance of shape function and its continuity requirement. | 4 | CO1 |
| Q 3 | Describe the penalty approach of applying boundary conditions. | 4 | CO1 |
| Q 4 | Explain Galerkin's approach in finite element method. | 4 | CO1 |
| Q 5 | Obtain the connectivity matrix for the discretized domain shown below, | 4 | CO1 |
| $\begin{gathered} \text { SECTION B } \\ (4 \mathrm{Qx} 10 \mathrm{M}=40 \text { Marks }) \end{gathered}$ |  |  |  |
| Q 6 | Foe the system shown in Figure, determine the nodal displacements. | 10 | CO 3 |
| Q 7 | For the plane truss, determine the individual elemental stiffness matrix of each element. Let $\mathrm{E}=210 \mathrm{GPa}$ and $\mathrm{A}=5 \times 10^{-4} \mathrm{~m}^{2}$ | 10 | CO3 |

|  | OR <br> For the plane truss, determine the individual elemental stiffness matrix of each element. Take $\mathrm{P}=10 \mathrm{kN}$ and $\mathrm{L}=1 \mathrm{~m}$. Let $\mathrm{E}=210 \mathrm{GPa}$ and $\mathrm{A}=5 \times 10^{-4} \mathrm{~m}^{2}$ |  |  |
| :---: | :---: | :---: | :---: |
| Q 8 | A rod shown in figure is subjected to a body force $f=1 \mathrm{~N} / \mathrm{m}^{3}$. Take $E=1$ $\mathrm{N} / \mathrm{m}^{2}, \mathrm{~A}=1 \mathrm{~m}^{2}$ and $L=3 \mathrm{~m}=$ length of the rod. Point load applied is $\mathrm{P}=1 \mathrm{~N}$. Assuming a displacement field as $u=a_{1}+a_{2} x$, use Rayleigh Ritz method to find the displacement field. | 10 | CO3 |

|  |  |  |  |
| :---: | :---: | :---: | :---: |
| Q 9 | Determine the sampling points and its weights in two-point formula of numerical integration and evaluate the integral, $\int_{-1}^{1} \int_{-1}^{1}\left(r^{2}+2 r s+s^{2}\right) \mathrm{d} r \mathrm{~d} s$ | 10 | CO1 |
|  | $\begin{gathered} \text { SECTION-C } \\ \text { (2Qx20M=40 Marks) } \end{gathered}$ |  |  |
| Q 10 | Determine the $[\mathbf{B}]$ matrix in natural coordinates for the plate element shown in Figure. The coordinates are in units of meters. | 20 | CO2 |
| Q 11 | Determine the inverse of the Jacobian matrix for the rectangular plate element shown in Figure. The coordinates are in the units of cm . | 20 | CO2 |
