<b>UPES</b> <b>End Semester Examination, DEC 2023</b>							
<b>Course: Probability and Statistics</b> <b>Program: B.Tech. (Electrical Engineering)</b> <b>Course Code: MATH2046</b>				<b>Semester: III</b> <b>Time: 03 hrs.</b> <b>Max. Marks: 100</b>			
<b>Instructions: Attempt All Questions.</b>							
<b>SECTION A</b> <b>(5Qx4M=20Marks)</b>							
S. No.					Marks	CO	
Q 1	Ten numbered cards are there from 1 to 15, and two cards are chosen at random such that the sum of the numbers on both the cards is even. Find the probability that the chosen cards are odd-numbered.				4	CO1	
Q 2	A coin that is fair in nature is tossed n number of times. The probability of the occurrence of a head six times is the same as the probability that a head comes 8 times, then find the value of n.				4	CO1	
Q 3	Fit a Straight line to the following data.				4	CO4	
	X	1	2	3			4
	Y	2.4	3	3.6	4	5	6
Q 4	Given $f(x, y) = xe^{-x(y+1)}$ , $x \geq 0, y \geq 0$ . Find the regression curve of Y on X.				4	CO4	
Q 5	Define Chi-square and obtain its sampling distribution. Mention prominent features of its frequency curve.				4	CO4	
<b>SECTION B</b> <b>(4Qx10M= 40 Marks)</b>							
Q 6	Let X be a continuous random variable with PDF $f_X(x) = \begin{cases} x^2 \left(2x + \frac{3}{2}\right) & 0 < x \leq 1 \\ 0 & \text{otherwise} \end{cases}$ If $Y = \frac{2}{x} + 3$ , find $\text{Var}(Y)$ .				10	CO3	
Q 7	The equations of two regression lines, obtained in a correlation analysis of 60 observations are: $15x = 6y + 34$ and $100y = 76x - 368$ . What is the correlation coefficient?				10	CO4	

Q 8	<p>A Person has two coins in his pocket, a fair coin, and a two-headed coin. He picks one at random from his pocket, flips it and gets heads.</p> <p>a) What is the probability that he flipped the fair coin?  b) If he flips the same coin a second time and again gets heads, what is the probability that he flipped the fair coin?</p>	10	CO1
Q 9	<p>The number of automobile accidents per week in a certain community were as follows:</p> <p style="text-align: center;">12, 8, 20, 2, 14, 10, 15, 6, 9, 4</p> <p>Are these frequencies in agreement with the belief that accident conditions were the same during this 10-week period?  [Note: tabulated <math>\chi^2</math> with 9 degrees of freedom at 0.05 level =16.916 at 0.01 level =21.666]</p> <p style="text-align: center;"><b>OR</b></p> <p>Derive the least square equations for fitting a curve of the type <math>Y = aX + (b/X)</math>, to a set of <math>n</math> points <math>(x_i, y_i); i = 1, 2, \dots, n</math>.</p>	10	CO4
<b>SECTION-C</b> <b>(2Qx20M=40 Marks)</b>			
Q 10	<p>For a distribution the mean is 10, variance is 16, <math>\gamma_2</math> is +1 and <math>\beta_2</math> is +4. Obtain the first four moments about the origin, i.e., zero. Comment upon the nature of distribution.</p>	20	CO2
Q 11	<p>Between the hours of 2 P.M. and 4 P.M. the average number of Phone calls per minute coming into switch board of a company is 2.5. Find the probability that during one particular minute there will be  (i) no phone call at all (ii) exactly 3 calls (iii) at least 5 calls. (Given <math>e^{-2.5} = 0.0821</math>).</p> <p style="text-align: center;"><b>OR</b></p> <p>Let <math>X</math> and <math>Y</math> be two jointly continuous random variables with joint PDF</p> $f_{XY}(x, y) = \begin{cases} x + cy^2 & 0 \leq x \leq 1, 0 \leq y \leq 1 \\ 0 & \text{otherwise} \end{cases}$ <p>a. Find the constant <math>c</math>.  b. Find <math>P\left(0 \leq X \leq \frac{1}{2}, 0 \leq Y \leq \frac{1}{2}\right)</math>.</p>	20	CO3
