UNIVERSITY OF PETROLEUM AND ENERGY STUDIES

End Semester Examination, December 2018

Programme : M Tech Energy Systems

Semester: III

Course : Energy Management and Audit

Time: 03 hrs.

Course Code : EPEC – 8002

Max. Marks: 100

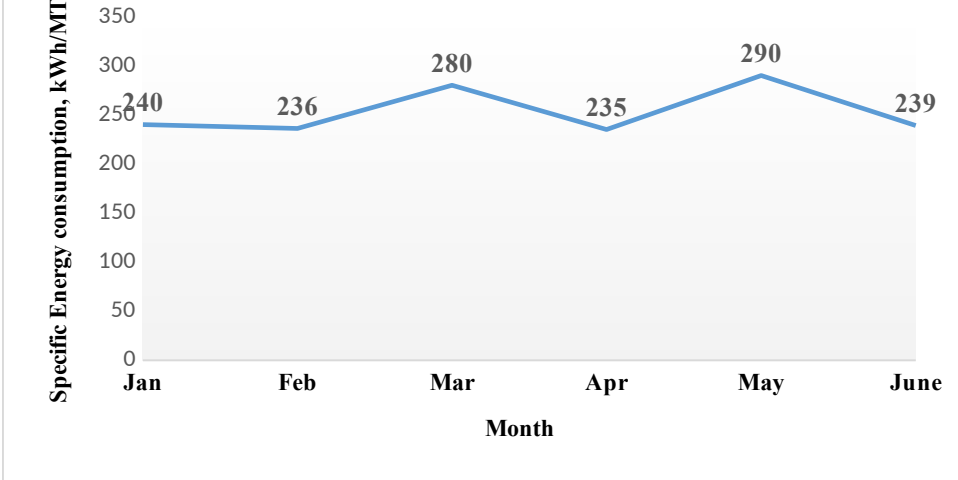

Instructions: Internal choice is given in Q9 And Q11.

SECTION A

S. No.		Marks	CO
Q1	Discuss the importance of energy audit in reference to the company and environment.	4	CO1
Q2	Discuss any five benchmarking parameters used by different industries with their benefits.	4	CO2
Q3	Draw and explain the cyclic process of ISO-50001 Energy Management System.	4	CO3
Q4	List down the benefits of PAT scheme with reference to the Designated Consumers and environment.	4	CO5
Q5	Explain the objective of the energy policy in an organization and give one example of energy policy.	4	CO3

SECTION B

Q6	Discuss in detail how Bachat Lamp Yojna played the crucial role in Indian economy also discuss the methodology how this scheme was introduced and implemented in India.	10	CO4														
Q7	A company has invested Rs.20 lakhs for installing WHR Boiler to recover waste heat from the flue gas in DG Set. Find out the IRR if the annual net savings cash flow accrued for 6 years as given below: The company got a bank loan for the investment at 8% interest rate. Whether the company can recover the investment and repay the bank loan. <table border="1" data-bbox="592 1554 901 1879"><thead><tr><th>Year</th><th>Annual Net Saving, Rs. lakhs</th></tr></thead><tbody><tr><td>1</td><td>6</td></tr><tr><td>2</td><td>6</td></tr><tr><td>3</td><td>7</td></tr><tr><td>4</td><td>7</td></tr><tr><td>5</td><td>8</td></tr><tr><td>6</td><td>8</td></tr></tbody></table>	Year	Annual Net Saving, Rs. lakhs	1	6	2	6	3	7	4	7	5	8	6	8	10	CO1

May	290																
June	239																

SECTION-C

Q10	Discuss how Energy Management System can be implemented in educational building by listing the mandates as per ISO-50001 Energy Management System standard.	20	CO3, CO5
Q11	<p>(a) Discuss in detail Space-by-Space Method of Calculating Interior Lighting Power Allowance as per ASHRAE 90.1 Building Energy standard.</p> <p>(b) Discuss the steps how Demand Side Management Programs are designed.</p> <p style="text-align: center;">OR</p> <p>(b) Discuss the process flow diagram and Sankey diagram of Paper and Pulp industry.</p>	10 10 10	CO4 CO4 CO4

UNIVERSITY OF PETROLEUM AND ENERGY STUDIES

End Semester Examination, December 2018

Programme : M Tech Energy Systems

Semester: III

Course : Energy Management and Audit

Time: 03 hrs.

Course Code : EPEC – 8002

Max. Marks: 100

Instructions: Internal choice is given in Q9 And Q11.

SECTION A

S. No.		Marks	CO
Q1	List down the main aspects of ISO-50001 Energy Management Systems Standard.	4	CO3
Q2	Explain the concept of Benchmarking and on what criterion benchmarking parameters are different from Specify Energy Consumption parameters.	4	CO2
Q3	Explain the objectives of Energy Conservation Building Code.	4	CO4
Q4	List down the methodology of conducting detail energy audit.	4	CO1
Q5	A thermal power plant uses 0.65 kg of coal to generate one kWh of electricity. If the coal contains 54% carbon by weight, calculate the amount of CO ₂ emissions/ kWh generated under complete combustion conditions.	4	CO2

SECTION B

Q6	Renovation and Modernization (R&M) of a 210 MW coal fired thermal power plant was carried out to enhance the operating efficiency from 28% to 32%. The specific coal consumption was 0.7 kg/kWh before R&M. For 8000 hours of operation per year, and assuming the coal quality remains the same, calculate i) the coal savings per year and ii) the expected avoidance of CO ₂ into the atmosphere in Tons/year if the emission factor is 1.53 kg CO ₂ /kg coal	10	CO4
Q7	A 500 MW coal plant based on conventional pulverized fuel has a gross efficiency of 38%. The Gross calorific value of the coal used is 4000 kCal/kg with 40% total carbon. A supercritical unit of 500 MW replaces the plant with a gross efficiency of 40% using the same characteristic coal. Calculate the following (a) Specific coal consumption after replacement (b) Amount of coal and carbon di-oxide saved during a year if the plant works for	10	CO2

	8000 hours.		
Q8	<p>A chemical plant has a contract demand of 2500 kVA with the power supply company. The average maximum demand of the plant is 2100 kVA at a power factor of 0.95. The maximum demand is billed at the rate of Rs.300/kVA. The minimum billable maximum demand is 75 % of the contract demand. An incentive of 0.5 % reduction in energy charges component of electricity bill are provided for every 0.01 increase in power factor over and above 0.95. The average energy charge component of the electricity bill per month for the company is Rs.11 lakhs. The plant decides to improve the power factor to unity.</p> <p>A. Determine the power factor capacitor kVAr required, annual reduction in maximum demand charges and energy charge component.</p> <p>B. What will be the simple payback period if the cost of power factor capacitors is Rs.800/kVAr.</p>	10	CO1
Q9	<p>(a) During energy audit following data were obtained on a 3 phase induction motor:</p> <p>Rated capacity:37 kW Rated voltage: 415 V Rated current: 65 A Rated power factor: 0.89 Operating voltage: 410 V Operating current: 40 A Operating power factor: 0.75</p> <p>Note: Motor efficiency does not change between 50 –100 % loading.</p> <p>The plant operates for 7000 hours per year with the electricity cost of Rs. 4 per unit. It is proposed to replace the original motor by a 30 kW energy efficient motor with 93% efficiency.</p> <ul style="list-style-type: none"> • Determine the rated efficiency and the loading of the original motor. • Calculate the loading of the replaced motors. • If replacing the existing motor with energy efficient motor costs Rs.75,000, determine the payback period for the investment required for the energy efficient motor over the ordinary motor. <p>(b) Explain in detail any 3 methods of relating plant energy consumption with production.</p>	5	CO1

	OR	5	CO2
	(b) Explain the process flow diagram of Indian Railways, draw and explain its Sankey Diagram.		
		5	CO2

SECTION-C

Q 10	<p>In the production department while reviewing weekly records, you note that energy consumption in the June 4th week has significantly increased from expected energy consumption. No reasons for this are documented and no actions are recorded. The energy manager says consumption probably increased because of a heat wave and states that no further evaluation or analysis is necessary.</p> <ol style="list-style-type: none"> What is the potential nonconformity implied in the incident. What is the potential impact of the incidence for the auditee organization. Is there sufficient evidence to raise nonconformity at this stage explain your views in detail. What further audit evidence would you seek in order to establish the full extent and significance of the incident. 	20	CO3
-------------	---	-----------	------------

Q11	<p>(a) During the Energy Audit of two pharmaceutical industries average SEC and production data was recorded for every 3 months in a year (4*3=12 one year) which is given below,</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="border: 1px solid black; background-color: #4a86e8; color: white; padding: 10px; border-radius: 10px; width: 45%;"> <table border="1" style="width: 100%; text-align: center; border-collapse: collapse;"> <tr> <td style="background-color: #2e75b6; color: white; padding: 5px;">3 Months Data SEC-121 kCal/ton Production-400 ton</td> <td style="background-color: #2e75b6; color: white; padding: 5px;">3 Months Data SEC-98 kCal/ton Production-60 ton</td> </tr> <tr> <td colspan="2" style="background-color: #c0c0c0; padding: 5px;">Industry-1</td> </tr> <tr> <td style="background-color: #2e75b6; color: white; padding: 5px;">3 Months Data SEC-101 kCal/ton Production-100 ton</td> <td style="background-color: #2e75b6; color: white; padding: 5px;">3 Months Data SEC-100 kCal/ton Production-200 ton</td> </tr> </table> </div> <div style="border: 1px solid black; background-color: #4a86e8; color: white; padding: 10px; border-radius: 10px; width: 45%;"> <table border="1" style="width: 100%; text-align: center; border-collapse: collapse;"> <tr> <td style="background-color: #2e75b6; color: white; padding: 5px;">3 Months Data SEC-129 kCal/ton Production-100 ton</td> <td style="background-color: #2e75b6; color: white; padding: 5px;">3 Months Data SEC-100 kCal/ton Production-56 ton</td> </tr> <tr> <td colspan="2" style="background-color: #c0c0c0; padding: 5px;">Industry-2</td> </tr> <tr> <td style="background-color: #2e75b6; color: white; padding: 5px;">3 Months Data SEC-194 kCal/ton Production-430 ton</td> <td style="background-color: #2e75b6; color: white; padding: 5px;">3 Months Data SEC-900 kCal/ton Production-120 ton</td> </tr> </table> </div> </div> <p>Make suitable assumptions and plot monthly Specific Energy Consumption of each Pharma Industry. It is proposed to implement energy efficiency project in both the industries by replacing the LDO fired boiler by biomass-fired boiler where it was calculated that energy dependency would be cut by 38.7% each</p>	3 Months Data SEC-121 kCal/ton Production-400 ton	3 Months Data SEC-98 kCal/ton Production-60 ton	Industry-1		3 Months Data SEC-101 kCal/ton Production-100 ton	3 Months Data SEC-100 kCal/ton Production-200 ton	3 Months Data SEC-129 kCal/ton Production-100 ton	3 Months Data SEC-100 kCal/ton Production-56 ton	Industry-2		3 Months Data SEC-194 kCal/ton Production-430 ton	3 Months Data SEC-900 kCal/ton Production-120 ton
