## Study of Business potential through Service Marketing at Retail Outlets

## **COVER LETTER**

Date: 16<sup>th</sup> August, 2013

Name: Shivam Agarwal

Address: U.P.E.S Dehradun

Company Name: Indian Oil Corportaion Limited

Company Address: : 2<sup>nd</sup> Floor, World Trade Centre, Connaught Place, Babar Road, Barakhamba

Lane, New Delhi - 110001

Dear Sir,

Presently at the threshold of my career, with an expected MBA degree in Oil & Gas management, I have completed my summer internship at Indian Oil Corporation Limited, New Delhi.

As of now I stand with buoyancy of comprehensive knowledge in field of Market Survey and of Research Methodology (RM) of a reputed organisation like Indian Oil Corporation Limited. I extend my deepest gratitude to U.P.E.S, Dehradun & explicitly to my mentor, Mr. P.K. Mullick (SM – Lubes) for being the channel in putting my summer internship through.

With Regards,

Shivam Agarwal

MBA (Oil & Gas Management)

## TO WHOM IT MAY CONCERN

This is to certify that Mr Shivam Agarwal, student of MBA (Oil & Gas Management), University of Petroleum and Energy Studies, Dehradun has successfully completed his training in Indian Oil Corporation Limited from 28.05.2013 to 26.07.2013. The training emphasized mainly on learning "Study of business potential through service marketing at retail outlets". His overall conduct and performance during the training was found to be good.

We wish him all success in his career.

Devesh Kumar Mgr(RLS) Delhi Delhi State Office

विवेश कुमार / DEVESH KUMAR प्राच्यक (स्थूचा करा.एस.) / Manager (Lubes R.S.) इंडियन शांवल कार्पोरेशन ति.(वि.स.) INDIAN OIL CORPORATION LTD. (M.D.) विस्ती राज्य कार्यालय DELHI STATE OFFICE गई विस्ती / NEW DELHI

## **ACKNOWLEDGEMENT**

It gives me immense pleasure in thanking Mr K.L. MURTHY, General Manager (LS) and Mr D. BHATTACHARJEE, Chief Manager (Lubes-RS), HO for giving us an opportunity to intern at Indian Oil Corporation Limited. I wish to express my deep sense of gratitude to my internal guides for their able guidance and useful suggestions, which helped me in completing the project work in time.

I would also like to thank our mentor Mr Prashant K. Mullick for without his guidance and support it would not have been possible to deliver such promising results in such a short period.

Mere words cannot describe my appreciation towards Mr Devesh Kumar who had the vision and concept of the work assigned to me during the duration of my training.

Needless to mention that Mr Khurana was always there to provide me with every facility that I needed during the course of my project for his timely guidance in the conduct of our project.

Finally, yet importantly, I would like to express heart full thanks to my beloved parents for their blessings, my friends and classmates for their help and wishes for the successful completion of this project.

## **DECLARATION**

I am submitting herewith my summer internship report entitled "Study of Business potential through Service Marketing at Retail Outlets" for the period 28/05/2013 to 26/07/2013 authorised by my external mentor for the purpose of assessment of summer internship programme.

This is hereby stated that this report is original in every sense of the term and it carries a sense of creditability and strength and that I have taken no shortcuts and remained both rigorous and scholarly.

I have tried my best to keep this work as watertight and clean as possible.

It may be further stated here that in the preparation of this report and projects undertaken some aid has been taken from a pool of professionally shared knowledge, a detailed description of which has been mentioned in the bibliography section of this report.

Shivam Agarwal MBA (Oil & Gas Management) 500021376

Date: 26.07.2013

## **EXECUTIVE SUMMARY**

Almost 12% Compounded Annual Growth Rate (CAGR) for passenger vehicles in last 15 years demands huge expansion in the service network in our country. But due to high capital investment and lack of space in the cities make this expansion difficult for auto — OEMs. This creates a huge business potential for downstream companies like IOCL by providing service station at retail outlets. This research project aimed at studying such business potential which will lead to increased lubricants sales and extra revenue generated due to the vehicle care services provided at retail outlets.

Therefore to start the research, questionnaire survey was conducted with 100 passenger vehicle owners which included questions mainly related to their vehicles, vehicle care services, type of service station they prefer, their satisfaction level etc. Another survey was conducted at 7 workshops which had questions related to the type of equipment required at workshops, details of various services provided at workshops, various operating expenses etc. Apart from these surveys two years lubricants sales data was collected from 8 retail outlets with service station and 7 retail outlets without service station respectively.

Then various hypothesis tests like T-Test for difference between means, Z-Test, Analysis Of Variance (ANOVA), Bonferroni test etc were performed on the collected data which led to the following conclusions:

- > Lubricants sales at retail outlets with service station is more than that at retail outlets without service stations.
- People's preference and satisfaction at various service stations like Authorized, Branded and Roadside workshops differ for vehicle care services like Routine Maintenance, Minor Repair, Major Repair and Accidental Repair.
- And it differ in the order Authorized > Branded > Roadside workshops for all 4 vehicle care services.
- People are likely to visit a petrol pump which provides multi brand car service facilities managed by renowned auto service providers (Like auto-OEMs, authorized OEM dealers) only for Routine Maintenance and Minor Repairs. And they are unlikely to visit the same for Major Repairs and Accidental Repairs.

Also financial analysis was done on the primary data collected through workshop survey form and secondary data collected through internet, journals etc which led to the following conclusions:

- > It is financially viable to open an authorized service station at retail outlets that shall have facilities for Routine maintenance and Minor repairs only.
- > Various equipment and tools required for such service stations are suggested.
- Initial fixed capital investment required is approximate ₹ 12,76,760
- ➤ This service station will be able to generate a revenue of approximate ₹ 2,28,090 from services per month. And an additional revenue of approximate ₹ 1,02,600 from lubricants sales per month.
- P Operating expenses for such service stations will be around ₹ 1,50,000 per month.

Thus to conclude the research I can say that there is a huge business potential for downstream companies like IOCL if they provide vehicle care services at their retail outlets. This will not only increase the sales of lubricants through such service station but will also generate extra revenue from the services provided.

## Study of Business potential through Service Marketing at Retail Outlets

## 1. INDIAN OIL CORPORATION LIMITED (Overview)

## 1.1 About Company

Indian Oil Corporation Limited, or Indian Oil, is an Indian state-owned oil and gas company with its headquarters in New Delhi, India. It began its operations in 1959 as Indian Oil Company Ltd. The Indian Oil Corporation was formed in 1964, with the merger of Indian Refineries Ltd. Indian Oil is the biggest oil producer and marketer Oil's product range covers petrol, diesel, LPG, auto LPG, aviation turbine fuel, lubricants, naphtha, bitumen, paraffin, kerosene etc. Xtra Premium petrol, Xtra Mile diesel, Servo lubricants, Indane LPG cooking gas, Autogas LPG, IndianOil Aviation are some of its prominent brands.

Recently Indian Oil has also introduced a new business line of supplying LNG (liquefied natural gas) by cryogenic transportation. This is called "LNG at Doorstep". The company is the world's 83<sup>rd</sup> largest public corporation, according to the Fortune Global 500 list, and the largest public corporation in India when ranked by revenue. Indian oil and its subsidiaries account for a 49% share in the petroleum products market, 31% share in refining capacity and 67% downstream sector pipelines capacity in India. The Indian oil group of companies owns and operates 10 of India's 22 refineries with a combined refining capacity of 65.7 million metric tons per year.

## 1.2 Vision of IOCL

Vision of IOCI is to be "The Energy of India" and A Globally Admired Company through Ethics, People, Innovation, Environment, Technology and Customers.

#### 1.3 Business

The business of IOCL encompasses seven areas of work i.e. Refining, Pipelines, Marketing, R&D, Petrochemicals, Natural Gas and E&P.

## 1.4 Major Projects

Some undergoing projects which are expected to be completed soon are as follows:

- Augmentation of Paradip-Haldia-Barauni Crude oil pipeline
- Paradip-Haldia-Durgapur LPG Pipeline
- De Bottlenecking of Salaya-Mathura crude pipeline
- Paradip Raipur Ranchi pipeline
- Refinery Project at Paradip (Orissa)

- FCC unit revamping in Mathura
- Butadiene Extraction unit at Panipat
- Construction of tanks and blending facility at Vadinar (5 X 85,000 KL)
- Integrated crude oil handling facility at Paradip

## 1.5 About Particular Site / Office

IOCL (Marketing Division) has its Head Office at Bandra, Mumbai and four Regional Offices in the Metro cities viz. Delhi, Kolkata, Mumbai and Chennai, 16 State Offices, 42 Divisional Offices and 33 LPG area offices.

I had to report to Delhi State Office situated at: 2<sup>nd</sup> Floor, World Trade Centre, Connaught Place, Babar Road, Barakhamba Lane, New Delhi – 110001.

## 1.6 Organizational Structure / Various Departments

The whole of Indian Oil Corporation (IOC) works under Corporate Office located at New Delhi. It follows hierarchical structure where the decision flows from top to bottom and the data flows from bottom to top. Under the corporate office there are 5 divisions namely- Pipelines, Refineries, R&D, Marketing & Assam oil division. The Marketing division located at Mumbai coordinates with the regional offices i.e. North, South, East & West Region office, the other Divisional Offices & SBI for decisions regarding investments. The Regional offices co-ordinates with respective state office that in turn co-ordinates with respective location offices.

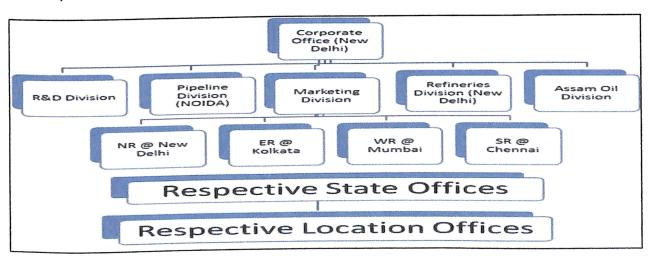

Fig 1.1 Organizational Structure of IOCL

The Delhi State Office (DSO) has three different departments for Indane Customers, for Retail Product Consumers (Retail Sales) and for Industrial / Institutional Bulk Consumers. All the concerned departments are headed by General Manager In – Charge (GM I/C) – DSO followed by General Manager (GM) LPG, General Manager (GM) Retail Sales (RS) and DGM Consumer Sales (CS).

Indane, Retail Sales and Bulk Consumer departments are further managed by Delhi Area Office under Chief Area Manager (LPG), Delhi Divisional Office (DDO) under Chief Divisional Retail Sales Manager (CDRSM) and Delhi Divisional Office (DDO) under Chief Divisional Consumer Sales Manager (CDCSM) respectively.

## 2. INTRODUCTION

The auto industry has been growing steadily in India. Though there has been little dip in the growth momentum during 2012-13, the Compounded Annual Growth Rate (CAGR) for passenger vehicles segment during last 15 years is almost 12%. While such huge growth in Passenger vehicles demands huge expansion of service network, due to very high capital requirement and scarcity of suitable space especially in cities make the expansion difficult for auto-OEMs. Most of the expansions take place in the outskirt of the cities where the real estate cost is lower. This makes the place inconvenient to the vehicle owners. As a result, either the workshops within the city limits are overcrowded or the city workshop is made the primary contact point and some vehicles are dispatched to workshops outside the city limit.

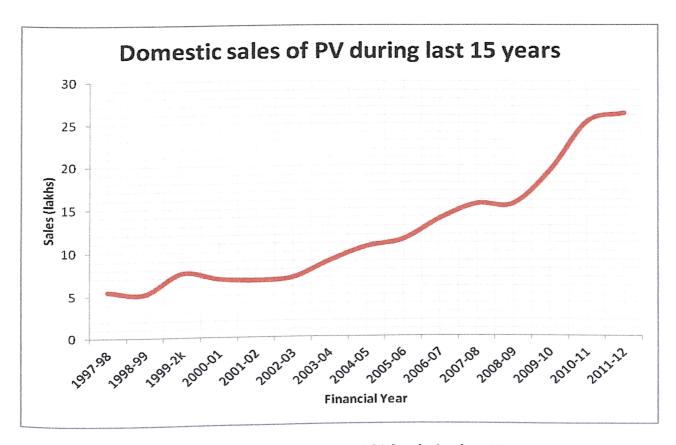

Fig 2.1 Domestic sales of Passenger Vehicles during last 15 years

The downstream oil companies play a very crucial role in capturing this gap in business opportunity by providing service stations at petrol pumps where at least routine maintenance and minor repairs can be undertaken. These outlets can be also the primary contact points for

the customers who will always find the petrol pumps the most suitable and convenient place. For higher requirement of services like major repairs, accident repairs etc., the vehicles can be taken to the bigger format workshops. Since the petrol pump dealers may not have the required expertise in this business, collaboration can be made with OEMs or OEM dealers for providing these services with mutually agreed terms and conditions.

This study is to analyse the difference in sales of the Lubricants at Retail Outlets with and without service stations respectively. This study is also to get the customer feedback on their preference of availing services from a petrol pump if it is provided by professional groups. The study will also address the potential of such business at petrol pumps and financial viability of the business.

## 3. LITERATURE REVIEW

Study of business potential through service marketing at retail outlets is a topic of great importance for the downstream companies in India. It includes the study of all possible businesses and benefits that could be extracted by the downstream companies if they provide services at their retail outlets.

From all the articles that we studied for this research we understood the following scenarios:

- ➤ The inability of Government to add to public transport adequately will make people buy more and more passenger vehicles each year. The increasing number of vehicles on road will add to burden of services required by them.
- > There has been constant increase in domestic sales of passenger cars in nation throughout past decade. The increase in vehicles on roads requires constant care and services.
- > The CAGR for passenger vehicles segment during last 15 years is almost 12% which demands huge expansion of service network.
- > Very high capital requirement and scarcity of suitable space especially in cities make the expansion of service network difficult for auto-OEMs.
- > I got know all the basic equipments and their prices which are required to start a workshop.

Thus to conclude literature survey I can say that there has been a tremendous growth in the sales of passenger vehicles during last 15 years due to various factors like poor public transport facilities etc. This calls for huge expansion of service network in the cities. The difficulty in the expansion of service network due to high capital cost and scarcity of space in the cities opens a huge business potential for the downstream companies. Through service marketing downstream companies can make a significant difference in the sales of lubes at retail outlets. It will also lead to increased revenue generated due to the services provided at retail outlets.

# ue

## Study of Business potential through Service Marketing at Retail Outlets

## 4. OBJECTIVES AND HYPOTHESIS

### 4.1 Objectives:

- To analyse the difference in sales of the lubricants at retail outlets with and without service station respectively.
- > To get the customer feedback on their preference of availing services from a petrol pump if it is provided by professional groups.
- > To address the potential of such business at petrol pumps and financial viability of the business.

### 4.2 Hyptothesis

The main objective of this project is to analyse the feasibility of opening a service station at a retail outlet. And to do that I have assumed and tested the following hypothesis:

1. <u>"Lubricants sales at retail outlets with service station is more than the retail outlets without service station"</u>

<u>Null hypothesis  $(H_o)$ </u>: Lubes sales at retail outlets with service station is less than the retail outlets without service station.

$$H_o: \mu_{ros} < \mu_{ro}$$

<u>Alternative hypothesis (H<sub>a</sub>)</u>: Lubes sales at retail outlets with service station is more than the retail outlets without service station.

$$H_a: \mu_{ros} \ge \mu_{ro}$$

<u>Note:</u> To prove the above hypothesis, **T-Test** was performed on the lubes sales data collected from various retail outlets with and without service stations respectively.

2. <u>"People's satisfaction and preference for various services like Routine maintenance, Minor repair, Major repair and Accidental repair vary at Authorized, Branded and Unorganized workshops"</u>

This hypothesis was further divided into four parts for Routine maintenance, Minor repair, Major repair and Accidental repair separately as follows:

a. <u>Null hypothesis (H<sub>o</sub>)</u>: People's satisfaction and preference for **Routine Maintenance** does not vary at Authorized, Branded and Unorganized workshops.

$$H_o: \mu_{aut} = \mu_{br} = \mu_{un}$$

<u>Alternative hypothesis (H<sub>a</sub>)</u>: People's satisfaction and preference for **Routine Maintenance** vary at Authorized, Branded and Unorganized workshops.

$$H_a: \mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

b. <u>Null hypothesis (H<sub>o</sub>)</u>: People's satisfaction and preference for **Minor Repair** does not vary at Authorized, Branded and Unorganized workshops.

$$H_o: \mu_{aut} = \mu_{br} = \mu_{un}$$

<u>Alternative hypothesis (H<sub>a</sub>)</u>: People's satisfaction and preference for **Minor Repair** vary at Authorized, Branded and Unorganized workshops.

$$H_a: \mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

c. <u>Null hypothesis (H<sub>o</sub>)</u>: People's satisfaction and preference for **Major Repair** does not vary at Authorized, Branded and Unorganized workshops.

$$H_o: \mu_{aut} = \mu_{br} = \mu_{un}$$

<u>Alternative hypothesis (H<sub>a</sub>)</u>: People's satisfaction and preference for **Major Repair** vary at Authorized, Branded and Unorganized workshops.

$$H_a: \mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

d. <u>Null hypothesis (H<sub>o</sub>)</u>: People's satisfaction and preference for **Accidental Repair** does not vary at Authorized, Branded and Unorganized workshops.

$$H_o: \mu_{aut} = \mu_{br} = \mu_{un}$$

<u>Alternative hypothesis  $(H_a)$ </u>: People's satisfaction and preference for **Accidental Repair** vary at Authorized, Branded and Unorganized workshops.

$$H_a: \mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

<u>Note:</u> To prove the above hypothesis, **Analysis Of Variance (ANOVA)** was performed on the data collected through question no. 11 of the questionnaire. Then to verify the rank of preference among Authorized, Branded and Unorganized workshops, **Bonferroni Test** was performed on the results of ANOVA.

3. <u>"Passenger vehicle owners are likely to avail vehicle care services from a multi-brand car</u> service facilities managed by renowed auto service providers at retail outlets"

This hypothesis was further divided into four parts for different vehicle care services at a petrol pump as Routine Maintenance, Minor Repair, Major Repair and Accidental Repair.

a. <u>Null hypothesis (H<sub>o</sub>)</u>: People are un-likely to visit a multi-brand car service facilities at retail outlets for Routine Maintenance.

$$H_0: \mu_{Ho} < 3.5$$

<u>Alternative hypothesis (Ha)</u>: People are likely to visit a multi-brand car service facilities at retail outlets for Routine Maintenance.

$$H_a: \mu_{Ho} \geq 3.5$$

b. <u>Null hypothesis (H<sub>o</sub>)</u>: People are un-likely to visit a multi-brand car service facilities at retail outlets for Minor Repairs.

$$H_o: \mu_{Ho} < 3.5$$

<u>Alternative hypothesis  $(H_a)$ </u>: People are likely to visit a multi-brand car service facilities at retail outlets for Minor Repairs.

$$H_a: \mu_{Ho} \geq 3.5$$

c. Null hypothesis  $(H_0)$ : People are un-likely to visit a multi-brand car service facilities at retail outlets for Major Repairs.

$$H_o: \mu_{Ho} < 3.5$$

<u>Alternative hypothesis  $(H_a)$ </u>: People are likely to visit a multi-brand car service facilities at retail outlets for Major Repairs.

$$H_a: \mu_{Ho} \ge 3.5$$

d. Null hypothesis  $(H_0)$ : People are un-likely to visit a multi-brand car service facilities at retail outlets for Accidental Repairs.

$$H_o: \mu_{Ho} < 3.5$$

<u>Alternative hypothesis (H<sub>a</sub>)</u>: People are likely to visit a multi-brand car service facilities at retail outlets for Accidental Repairs.

$$H_a: \mu_{Ho} \geq 3.5$$

<u>Note</u>: To prove the above four hypothesis **Z-Test** was performed on the data collected through question no. 17 of the questionnaire.

### 5. RESEARCH METHEDOLOGY

## 5.1 Design of sampling plan

- Type of universe under study for this research is finite. I planned to take samples from the whole population of this city (New Delhi).
- Sampling unit for the research is chosen to be the passenger vehicle owners of this city.
- Sampling frame for this research includes passenger vehicle owners visiting the retail outlets for refueling, various commercial vehicle organizations and passenger vehicle owners availing vehicle care services at various workshops across the city.
- The size of sample for the customer questionnaire decided is hundred. Whereas the sample size for retail outlets from where the lubricants sales data has to be recorded is chosen to be five for retail outlets with service station and five for retail outlets without service station.
- Stratified random sampling is chosen for this research. I divided finite universe into four geographical areas as North, South, East and West. And then random samples are to be chosen from the defined strata (geographical area).

## 5.2 Design of questionnaire

- Questionnaire for passenger vehicle owners contains 17 questions. They are mostly related to vehicle services, people's satisfaction at various workshops, and people's tendency to visit workshops at retail outlets. It also contains questions regarding age, price and ownership of the vehicles
- Questionnaire for the workshop owner contains questions related to the workshop, equipments available and services provided to the customers at workshop. It also contains questions regarding the service charges, various operating expenditures and approximate revenue generated, number of cars they service each day and quantity of lubes they sell each month at the workshop.

## 5.3 Execution of survey and data collection

- Survey were conducted at various retail outlets and workshops which covered all our defined strata i.e. north, south, east and western part of the city.
- Primary data
  - 1. It was collected through questionnaires.
  - 2. Personal interview with workshop owners.
  - 3. Personal interview with retail outlet owners.

- Secondary data (Collected through internet and journals)
  - 1. The population and growth trend of passenger vehicles in the country.
  - 2. Current price list of various equipments used at the service stations
  - 3. Information related to various taxation policies on petroleum products and service industry.
- All the collected data was tabulated in MS Excel for its analysis and was also coded for the researcher's convenience.

## **6 DATA ANALYSIS**

**6.1** Null hypothesis  $(H_0)$ : Lubes sales at retail outlets with service station is less than the retail outlets without service station.

 $H_o: \mu_{ros} < \mu_{ro}$ 

<u>Alternative hypothesis  $(H_a)$ </u>: Lubes sales at retail outlets with service station is more than the retail outlets without service station.

 $H_a: \mu_{ros} \ge \mu_{ro}$

CM				
Enterprises	13547	11747		
Total	38164	28575.35		
Mean	7632.8	5715.07		
Variance	11316973.33	11482177.15		

Table 6.1

### **Hypothesis test:**

Above hypothesis was tested using T-Test for difference between means.

## (a) 2011-12

RO	Mean Sales (X̄)	Variance $(\sigma_s)^2$	Size of sample (n)
With Service station (1)	13814.3125	35772992	8
Without service station (2)	7632.8	11316973	5

$$t = \frac{\overline{X1} - \overline{X2}}{\sqrt{\frac{(n_1 - 1)\sigma_{s1}^2 + (n_2 - 1)\sigma_{s2}^2}{n_1 + n_2 - 2}} \times \sqrt{\frac{1}{n_1} + \frac{1}{n_2}}}$$

With d.f. = 
$$n_1 + n_2 - 2 = 8 + 5 - 2 = 11$$

$$t = 2.0914$$

As H<sub>a</sub> is one-sided, we shall apply a one tailed test for determining the rejection region at 5 percent level which come to as under, using table of t-distribution for 11 degrees of freedom.

The observed value of t is 2.0914 which falls in the rejection region therefore we reject the null hypothesis and conclude that Lubes sales at retail outlets with service station is more than retail outlets without service station.

## (b) 2012-13

RO	Mean Sales (X̄)	Variance (σ₅)²	Size of sample (n)
With Service station (1)	11319.5	27009437	8
Without service station (2)	5715.07	11482177	5

$$t = \frac{\overline{X1} - \overline{X2}}{\sqrt{\frac{(n_1 - 1)\sigma_{s1}^2 + (n_2 - 1)\sigma_{s2}^2}{n_1 + n_2 - 2}} \times \sqrt{\frac{1}{n_1} + \frac{1}{n_2}}}$$

With d.f. =  $n_1 + n_2 - 2 = 8 + 5 - 2 = 11$ 

t = 2.1269

As  $H_a$  is one-sided, we shall apply a one tailed test for determining the rejection region at 5 percent level which comes to as under, using table of t-distribution for 11 degrees of freedom.

R: |t| > 1.796

The observed value of t is 2.1269 which fall in the rejection region therefore we reject the null hypothesis and conclude that Lubes sales at retail outlets with service station are more than retail outlets without service station.

**6.2** "People's satisfaction and preference for various services like Routine maintenance, Minor repair, Major repair and Accidental repair vary at Authorized, Branded and Unorganized workshops"

This hypothesis was further divided into four parts for Routine maintenance, Minor repair, Major repair and Accidental repair separately as follows:

Data collected: It is attached at the end in the appendix.

#### **Hypothesis test:**

[A] The above hypothesis is tested by using One-way ANOVA technique and the methodology used is stated below.

### Methodology:

- (i) Obtain the mean of each sample i.e, obtain  $\overline{X_1}$ ,  $\overline{X_2}$  and  $\overline{X_3}$
- (ii) Work out the mean of the sample means as follows:

$$\overline{\overline{X}} = \overline{\frac{X_1}{3} + \overline{X_2} + \overline{X_3}}$$

(iii) Take the deviations of the sample mean from the mean of the sample means and calculate the square of such deviations which may be multiplied by the number of items in the corresponding sample, and then obtain their total. This is known as sum of squares for variance between the samples (or SS between). Symbolically this can be written:

SS between = 
$$n_1(\overline{X_1} - \overline{\overline{X}})^2 + n_2(\overline{X_2} - \overline{\overline{X}})^2 + n_3(\overline{X_3} - \overline{\overline{X}})^2$$

(iv) Divide the result of the above step be the degrees of freedom between the samples to obtain variance or mean square (MS) between samples. Symbolically this can be written as:

$$MS \ between = \frac{SS \ between}{K-1}$$

where (K-1) represents degrees of freedom (d.f.) between samples.

(v) Obtain the deviations of the values of the sample items for all the samples from corresponding means of the samples and calculate the squares of such deviations and then obtain their total. This total is known as the sum of squares for variance within samples (or SS within). Symbolically this can be written as:

SS within = 
$$\sum_{i=1}^{k} (X_{1i} - \overline{X_1})^2$$

i = 1,2,3

(vi) Divide the result of above step by the degrees of freedom within samples to obtain the variance or mean square (MS) within samples. Symbolically, this can be written as:

$$MS$$
 within =  $\frac{SS \text{ within}}{(n-K)}$ 

Where (n-k) represents degrees of freedom within samples, n = total number of items in all the samples i.e.,  $n_1 + n_2 + n_3$ k = number of samples

(vii) Finally F ratio can be worked out as under:

$$F - Ratio = \frac{MS \ between}{MS \ within}$$

This ratio is used to judge whether the difference among several sample means is significant or not.

- [B] The results from ANOVA were then analysed using Bonferroni Test to determine the rank of preference among Authorized, Branded and Unorganized workshops. *Methodology:*
- (i) This is applied to all pairs.
- (ii) Find the following interval

$$\overline{X_i} - \overline{X_j} \pm t_{\frac{\alpha}{2c}} \sqrt{MSE\left(\frac{1}{n_i} + \frac{1}{n_j}\right)}$$

Where,

- $\overline{X_i}$  and  $\overline{X_i}$  are mean of the two pairs.
- $t_{\frac{\alpha}{2c}}$  is the t value and level of significance divided by two times the total number of pairs.
- MSE is Mean Square (MS) within samples.
- n<sub>i</sub> and n<sub>j</sub> are the number of items in the two samples.
- (iii) Reject  $H_0$  or conclude that  $\overline{X_i} > \overline{X_j}$  if the above interval doesn't contain zero.

## 6.2.1 Routine maintenance

 $\frac{\text{Null hypothesis }(H_o)}{\text{homogenized preference for Routine Maintenance}} \ \text{constant} \ \text{doesn't vary at Authorized, Branded and Unorganized workshops.}$ 

$$H_o: \mu_{aut} = \mu_{br} = \mu_{un}$$

<u>Alternative hypothesis  $(H_a)$ </u>: People's satisfaction and preference for Routine Maintenance vary at Authorized, Branded and Unorganized workshops.

$$H_a: \mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

#### **ANOVA Table:**

SUMMARY					
Groups	Count	Sum	Average	Variance	
Authorized	100	385	3.85	1.623737	
Branded	100	247	2.47	3.605152	
Roadside	100	134	1.34	3.034747	

	P	NOVA	1		
Source of Variation	SS	Df	MS	F	F crit
Between Groups	316.0467	2	158.0233	57.36821	3.026153
Within Groups	818.1	297	2.754545		
Total	1134.147	299			

Table 6.3

The above table shows that the calculated value of F is 57.36 which is more than the critical value of 3.02 at 5% level with d.f. being  $v_1$  = 2and  $v_2$  = 297. Which rejects the null hypothesis and thus we can conclude that "People's satisfaction and preference for Routine Maintenance vary at Authorized, Branded and Unorganized workshops".

i.e. 
$$\mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

#### **Bonferroni Test:**

Pairs	Interval	Conclusion
Authorized & Branded	0.7806 < xi - xj < 1.9794	X <sub>aut</sub> > X <sub>br</sub>
Authorized & Unorganized	1.9106 < xi - xj < 3.1094	X <sub>aut</sub> > X <sub>un</sub>
Branded & Unorganized	0.5306 < xi - xj < 1.7294	X <sub>br</sub> > X <sub>un</sub>

OR, 
$$X_{aut} > X_{br} > X_{un}$$

Thus we can conclude that people's satisfaction and preference for Routine maintenance vary and decrease in the order of Authorized, Branded and Unorganized.

#### 6.2.2 Minor repair

<u>Null hypothesis  $(H_0)$ </u>: People's satisfaction and preference for Minor repair doesn't vary at Authorized, Branded and Unorganized workshops.

$$H_o: \mu_{aut} = \mu_{br} = \mu_{un}$$

<u>Alternative hypothesis (H<sub>a</sub>)</u>: People's satisfaction and preference for Minor repair vary at Authorized, Branded and Unorganized workshops.

$$H_a: \mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

#### **ANOVA Table:**

SUMMARY							
Groups	Count	Sum	Average	Variance			
Authorized	100	325	3.25	2.734848			
Branded	100	228	2.28	3.254141			
Roadside	100	139	1.39	2.886768			

ANOVA						
Source of Variation	SS	df	MS	F	F crit	
Between Groups	173.0867	2	86.54333	29.25159	3.026153	
Within Groups	878.7	297	2.958586			
Total	1051.787	299				

#### Table 6.4

The above table shows that the calculated value of F is 29.2515 which is more than the critical value of 3.02 at 5% level with d.f. being  $v_1$  = 2and  $v_2$  = 297. Which rejects the null hypothesis and thus we can conclude that "People's satisfaction and preference for Minor Repair vary at Authorized, Branded and Unorganized workshops".

i.e. 
$$\mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

#### **Bonferroni** test

Pairs	Interval	Conclusion
Authorized & Branded	0.3488 < xi - xj < 1.5912	$X_{aut} > X_{br}$
Authorized & Unorganized	1.2388 < xi - xj < 2.4812	X <sub>aut</sub> > X <sub>un</sub>
Branded & Unorganized	0.2688 < xi - xj < 1.5112	$\chi_{br} > \chi_{un}$

OR, 
$$X_{aut} > X_{br} > X_{un}$$

Thus we can conclude that people's satisfaction and preference for Minor repair vary and decrease in the order of Authorized, Branded and Unorganized.

## 6.2.3 Major repair

<u>Null hypothesis  $(H_o)$ </u>: People's satisfaction and preference for Major repair doesn't vary at Authorized, Branded and Unorganized workshops.

$$H_o: \mu_{aut} = \mu_{br} = \mu_{un}$$

<u>Alternative hypothesis  $(H_a)$ </u>: People's satisfaction and preference for Major repair vary at Authorized, Branded and Unorganized workshops.

$$H_a: \mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

## **ANOVA Table:**

SUMMARY						
Groups	Count	Sum	Average	Variance		
Authorized	100	264	2.64	3.828687		
Branded	100	161	1.61	3.230202		
Roadside	100	69	0.69	1.549394		

ANOVA							
Source of Variation	SS	df	MS	F	F crit		
Between Groups	190.3267	2	95.16333	33.16457	3.026153		
Within Groups	852.22	297	2.869428				
Total	1042.547	299					

Table 6.5

The above table shows that the calculated value of F is 33.1645 which is more than the critical value of 3.02 at 5% level with d.f. being  $v_1 = 2$  and  $v_2 = 297$ . Which rejects the null hypothesis and thus we can conclude that "People's satisfaction and preference for Major Repair vary at Authorized, Branded and Unorganized workshops".

i.e. 
$$\mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

#### Bonferroni test

Pairs	Interval	Conclusion	
Authorized & Branded	0.4182 < xi - xj < 1.6418	$X_{aut} > X_{br}$	
Authorized & Unorganized	1.3382 < xi - xj < 2.5618	X <sub>aut</sub> > X <sub>un</sub>	
Branded & Unorganized	0.3082 < xi - xj < 1.5318	$X_{br} > X_{un}$	

OR, 
$$X_{aut} > X_{br} > X_{un}$$

Thus we can conclude that people's satisfaction and preference for Major repair vary and decrease in the order of Authorized, Branded and Unorganized.

#### 6.2.4 Accidental repair

<u>Null hypothesis (H<sub>o</sub>)</u>: People's satisfaction and preference for Accidental repair doesn't vary at Authorized, Branded and Unorganized workshops.

$$H_o: \mu_{aut} = \mu_{br} = \mu_{un}$$

<u>Alternative hypothesis (H<sub>a</sub>)</u>: People's satisfaction and preference for Accidental repair vary at Authorized, Branded and Unorganized workshops.

$$H_a: \mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

#### **ANOVA Table:**

SUMMARY						
Groups	Count	Sum	Average	Variance		
Authorized	100	182	1.82	4.351111		
Branded	100	117	1.17	2.930404		
Roadside	100	44	0.44	0.976162		

ANOVA						
Source of Variation	SS	Df	MS	F	F crit	
Between Groups	95.32667	2	47.66333	17.31601	3.026153	
Within Groups	817.51	297	2.752559			
Total	912.8367	299				

#### Table 6.6

The above table shows that the calculated value of F is 17.3160 which is more than the critical value of 3.02 at 5% level with d.f. being  $v_1$  = 2and  $v_2$  = 297. Which rejects the null hypothesis and thus we can conclude that "People's satisfaction and preference for Accidental Repair vary at Authorized, Branded and Unorganized workshops".

i.e. 
$$\mu_{aut} \neq \mu_{br} \neq \mu_{un}$$

#### Bonferroni test

Pairs	Pairs Interval	
Authorized & Branded	0.0508 < xi - xj < 1.2492	X <sub>aut</sub> > X <sub>br</sub>
Authorized & Unorganized	0.7808 < xi - xj < 1.9792	X <sub>aut</sub> > X <sub>un</sub>
Branded & Unorganized	0.1308 < xi - xj < 1.3292	X <sub>br</sub> > X <sub>un</sub>

OR, 
$$\chi_{aut} > \chi_{br} > \chi_{un}$$

Thus we can conclude that people's satisfaction and preference for Accidental repair vary and decrease in the order of Authorized, Branded and Unorganized.

# **6.3** "Passenger vehicle owners are likely to avail vehicle care services from a multi-brand car service facilities managed by renowed auto service providers at retail outlets"

This hypothesis was further divided into four parts for different vehicle care services at a petrol pump as Routine Maintenance, Minor Repair, Major Repair and Accidental Repair. **Data collected:** It is attached at the end in the appendix.

## **Hypothesis test:**

[A] The above hypothesis is tested by using Z-TEST and the methodology used is stated below.

## Methodology:

(i) Calculate the mean of samples as

$$\overline{X} = \frac{X_1 + X_2 + X_3 \dots + X_n}{n}$$

Where, n is the total number of samples.

(ii) Calculate the standard deviation of the samples ( $\sigma_s$ ) as

$$\sigma_s = \sqrt{\frac{\sum (X_i - \overline{X})^2}{(n-1)}}$$

(iii) Calculate the test statistic Z as

$$Z = \frac{\overline{X} - \mu_{H_o}}{\frac{\sigma_s}{\sqrt{n}}}$$

- (iv) Compare the calculated value of Z with the value of Z from normal curve area table at 5% level of significance.
- (v) Reject the null hypothesis if test statistic Z value lies in the rejection region or else accept the null hypothesis.

## 6.3.1 Routine Maintenance

<u>Null hypothesis  $(H_o)$ </u>: People are un-likely to visit a multi-brand car service facilities at retail outlets for Routine Maintenance.

$$H_o: \mu_{Ho} < 3.5$$

Alternative hypothesis  $(H_a)$ : People are likely to visit a multi-brand car service facilities at retail outlets for Routine Maintenance.

$$H_a: \mu_{Ho} \ge 3.5$$

#### **Z-Test**

Mean	$\Sigma(X_i - X)^2$	σ <sub>s</sub>	Statistic Z
3.75	118.75	1.095215	2.282658

As H<sub>a</sub> is one sided in our case. We shall be applying a one-tailed test for determining the rejection region at 5% level of significance which comes to as under, using normal curve table:

The observed value of Z is 2.28 which falls in the rejection region and thus  $H_{\text{o}}$  is rejected.

Thus we may conclude that

"People are likely to visit a multi-brand car service facility at retail outlets for Routine Maintenance".

## 6.3.2 Minor Repairs

<u>Null hypothesis (H<sub>o</sub>)</u>: People are un-likely to visit a multi-brand car service facilities at retail outlets for Minor repairs.

$$H_o: \mu_{Ho} < 3.5$$

Alternative hypothesis  $(H_a)$ : People are likely to visit a multi-brand car service facilities at retail outlets for Minor repairs.

$$H_a: \mu_{Ho} \ge 3.5$$

#### **Z-Test**

Mean	$\Sigma(X_i - X)^2$	$\sigma_{\scriptscriptstyle 5}$	Statistic Z
3.68	107.76	1.043305	1.725287

As  $H_a$  is one sided in our case. We shall be applying a one-tailed test for determining the rejection region at 5% level of significance which comes to as under, using normal curve table:

The observed value of Z is 1.72 which falls in the rejection region and thus  $H_{\circ}$  is rejected. Thus we may conclude that

"People are likely to visit a multi-brand car service facility at retail outlets for Minor Repairs".

#### 6.3.3 Major Repairs

<u>Null hypothesis (H<sub>o</sub>)</u>: People are un-likely to visit a multi-brand car service facilities at retail outlets for Major repairs.

$$H_0: \mu_{Ho} < 3.5$$

Alternative hypothesis  $(H_a)$ : People are likely to visit a multi-brand car service facilities at retail outlets for Major repairs.

$$H_a: \mu_{Ho} \ge 3.5$$

#### **Z-Test**

Mean	$\Sigma(X_1 - X)^2$	σ <sub>s</sub>	Statistic Z	
2.80	169.79	1.309599	-4.65791	and the same of

As  $H_a$  is one sided in our case. We shall be applying a one-tailed test for determining the rejection region at 5% level of significance which comes to as under, using normal curve table:

The observed value of Z is -4.65 which falls in the acceptance region and thus  $H_{\text{o}}$  is accepted. Thus we may conclude that

"People are un- likely to visit a multi-brand car service facility at retail outlets for Major Repairs".

## 6.3.4 Accidental Repairs

<u>Null hypothesis (H<sub>o</sub>)</u>: People are un-likely to visit a multi-brand car service facilities at retail outlets for Accidental repairs.

$$H_0: \mu_{H_0} < 3.5$$

Alternative hypothesis  $(H_a)$ : People are likely to visit a multi-brand car service facilities at retail outlets for Accidental repairs.

$$H_a: \mu_{Ho} \ge 3.5$$

#### **Z-Test**

Mean	$\Sigma(X_i - X)^2$	σ <sub>s</sub>	Statistic Z
2.6	188	1.378038	-6.53102

As  $H_a$  is one sided in our case. We shall be applying a one-tailed test for determining the rejection region at 5% level of significance which comes to as under, using normal curve table:

The observed value of Z is -6.53 which falls in the acceptance region and thus  $H_{\text{o}}$  is accepted. Thus we may conclude that

"People are un- likely to visit a multi-brand car service facility at retail outlets for Accidental Repairs".

## **6.4 STRUCTURED INTERVIEW REPORT (WORKSHOP)**

Based on the information we collected after visiting 6 workshops, I could conclude the following points:

- Average number of vehicles that can be serviced per month in a nominal sized workshop is 160.
- Average lubes and greases sold per month is 360 litres.
- Number of service bays required is 2-3.
- Approximate areas of different facilities in the workshop.

Facility	Area required		
Service area	500 ft <sup>2</sup>		
Customer lounge	NIL		
Office area	60 ft <sup>2</sup>		
Stores	90 ft <sup>2</sup>		

Various equipment required quantity and approximate cost.

Name of equipments/ tools	Number (qty)	Approx cost per equipment/set
Hydraulic lifts (Two post)	2	220000
Wheel alignment (Computerized wheel	1	310000
alignment)		
Wheel balancer	1	125000
Fuel Injector cleaner	1	40000
Battery charger and checking machines	1	25000
Scanning machine (Engine scanner)	1	190000
AC Compressor (5HP, 225 Litre Tank, 2 stage, 3 Phase)	1	72000
	1	100000
ETA plant		1082000
TOTAL		151480
VAT (14%) Packing, Transportation and other charges (4%)		43280
Grand total		12,76,760

 Various vehicle care services to be provided at the workshop, their rates and approximate income generated per month from the services.

Services available	Rate per such service	Approx income generated per month from these services (₹)
General service	550	55000
Washing	280	28000
Dry cleaning	550	27500
Wheel alignment & balancing	200+200	40000
Battery charging	50	2500
Minor accidental job	>2000	50000
o. doctor	Total	2,03,000

Manpower required and cost incurred per month

Туре	Number	Total cost per month (₹)		
Mechanic	4	12000*4 = 48000 8000*3 = 24000		
Helper	3			
Others	3	6000*3 = 18000		
Total	10	90,000		

- Other expenditures incurred by the workshop
   Electricity bill, water bill and other miscellaneous expenses = ₹ 70000 per month.
- Revenues generated

Service revenue	₹ 2,03,000
Service tax (12 %)	₹ 24,360
Cess tax (2% of service tax)	₹ 487.20
H Cess tax (1% of service tax)	₹ 243.6
Total	₹ 2,28,090.8

0
500

Therefore, total revenue generated = ₹ 3,30,690.8 (per month)

#### 6.4.1 CRITICAL ANALYSIS

Avg no of vehicles serviced (per month)	160
Avg lubes sold (per month)	360 litres
Approx Fixed capital investment	₹ 12,76,760
Approx revenue generated from services (per month)	₹ 2,28,090.80
Approx revenue generated from lubes sales (per month)	₹ 1,02,600
Manpower cost (per month)	₹ 90,000
Other expenses (electricity, water etc), per month	₹ 70,000

### **6.5 Conclusions from Hypothesis Tests**

- Lubricants sales at retail outlets with service station is more than the retail outlets without service station.
- People's satisfaction and preference for various services like Routine maintenance, Minor repair, Major repair and Accidental repair differ at Authorized, Branded and Unorganized workshops and it vary in the order

Authorized > Branded > Unorganized

 Passenger vehicle owners are likely to visit a multi brand service station at retail outlet only for Routine maintenance and Minor repairs and unlikely to visit for Major repairs and Accidental repairs.

#### 7 CONCLUSIONS

#### 7.1 Research findings

- Huge growth of the auto industry in our country demands huge expansion of vehicle care service network.
- Based on the T-Test performed at the lubes sales data at various retail outlets I found that Lubricants sales at retail outlets with service station is significantly more than retail outlets without service station. This is mainly due to approximate 350-400 litres of extra lubes sold at the service station every month.
- ANOVA test performed on the data collected through questionnaire proved that people's satisfaction and preference for various vehicle care services vary significantly at Authorized, Branded and Unorganized service stations. This is mainly due to the difference in quality of repair, genuine spares, service time, transparency in billing and various other factors.
- Bonferroni test applied further on the results obtained from ANOVA test proved that people
  are most satisfied with Authorized service station. Then comes other branded service
  station and they are least satisfied with unorganized service stations.
  They prefer authorized service station the most and unorganized service station the least.
- Z-Test performed on the data collected through questionnaire proved that people are likely
  to visit a petrol pump which provides multi-brand car service facilities managed by renowed
  auto service providers (like auto-OEMs, authorized OEM dealers, reputed multibrand
  operators) only for Routine maintenance and Minor repairs. They are unlikely to visit the
  same for Major and Accidental repairs.
  - This is because that people are more likely to visit the main authorized OEM service station with more vehicle care facilities for major and accidental repairs rather than smaller service stations at retail outlets.
- It is financially viable to open a small authorized service station at retail outlets which should have facilities for routine maintenance and minor repairs.
- Various equipment required for such service station are suggested. Initial fixed capital investment required is approximate ₹ 12,76,760. This service station will generate a revenue of approximate ₹ 2,28,090.80 from services per month. And an additional revenue of approximate ₹ 1,02,600 from lubricants sales per month.

Operating expenditure for such service stations will be around ₹ 1,50,000 per month.

#### 7.2 Contribution of the study

- Since it was the first research of its kind, it will contribute in the further study if done by any researcher.
- Findings of the study will contribute to the organization's decision making in the same field.

#### 7.3 Limitations

- This study is only limited to the passenger vehicles and can't be applied to heavy motor vehicles like trucks, buses etc.
- Chi-square test couldn't be applied for more analysis because of lesser samples.

#### 7.4 Scope for the future research

- This study can well be used by other researchers in their literature review.
- By increasing the size of sample, the findings of this study can be improved and also more analysis can be done then.
- The findings of this study can be used in organization's decision making.

### 9.2 Customer questionnaire form

#### QUESTIONNAIRE

A survey is being conducted on the need for organized auto service of passenger vehicle segment. Your feedback in the following questionnaire will be very useful in this survey. You are requested to kindly give a few minutes of your valuable time in this regard. Please tick the appropriate boxes and give your information at other places, as required.

## 9.3 Workshop Equipment Price List 2012-13 (Apex technologies)

	Apex Equipment price list 2012-2013	Price
	Workshop & Wheel Diagnostic Equipments	
	a) 3D Wheel Alignment	540,000
	b) Computerized Wheel Alignment ( Model Sapphire I )	310,000
	4 Wheel Alignment, 4 Head 8 sensor, RF/ Bluetooth Transmission	
	Laser Wheel Alignment ( Redline )	108000
	Laser Wheel Alignment (Redline - P ) Portable	90,000
	Optional:	
	a) Laser Wheel Alignment - Alignment & Printout Software	8,000
	c) HCV Alignment Kit	15,000
2	Wheel Balancer	
	Wheel Balancer ( Orbit D ) Digital Display	75,000
	Optional : Wheel Protection Cover	5,000
_	Wheel Balancer ( Orbit V ) Video-graphic TFT display	110,000
	Optional:	111100
	b) Balancing weights (one set)	11,100
3	Tyre Changer – Pneumatic ( Jupiter )	75,000
_	Truck Tyre Changer— ( Jupiter T)	360,000
4	to the built Tyro Inflator	110,000
	Nitrogen Generator ( with inbuilt Tyre Inflator )	28,500
_	Tyre Inflator / Deflator ( Double Display Range 150 Psi )  MS stand ( Regular)	4,000
_	We stalle ( Regular)	
<u></u>	Two Post Lift ( 3.2 Ton Electrohydraulic )	110,000
_	Portable Scissor Lift ( Scissor Lift With Wheels 3.2 Ton )	115,000
_	Four Post Lift ( 4 Ton Hydraulic ) ( Tusker - 4 )	260,000
	Scissor Lift ( 3.2Ton Hydraulic, Low/High Rise ) ( Tusker - 3S )	130,000
	Petrol Injector Cleaner	

	Fuel Injector Cleaner ( Rainbow)	40,000
	Optional:	
	a) Ultrasonic Bath	22,000
	b) Cleaner Fluid (5 Lts. Pack)	1,500
	Engine De-carbonizer ( Petrol Cum Diesel )	45,000
_	Cleaning Solvent ( 1 Litre bottle )	800
	Air Compressors ( Apex Air Jet )	
_	1 HP, 110 Litre tank, 1 Stage 1 Phase	19,300
_	2HP, 45 Litre Tank ,Portable direct drive 1 Stage, 1 Phase	21,000
	2HP, 110 Litre Tank , 1 Stage, 1 Phase	34,300
_	3HP, 180 Litre Tank, 2 Stage, 1/3 Phase	53,000
_	5HP, 225 Litre Tank, 2 stage, 3 Phase	72,000
	7.5 HP, 250 Litre Tank, 3 stage , 3 Phase	84,800
	10 HP, 420 Litre Tank, 3 Stage, 3 Phase	108,000
_	AC Servicing Equipment ( Fully Automatic )	155,000
	AC Servicing Equipment ( Semi Automatic )	135,000
	Smoke Check ( Pollution checking Equipment , Diesel )	150,000
-	Four Gas Analyzer ( Pollution Checking Equipment , Petrol )	155,000
	Engine scanner ( Launch X-431 )	190,000
	A Latinton	110,000
$\dashv$	Immobilizer Key encoder & duplicator	100,000
$\dashv$	Washing Hoist ( W/o Hydraulic Oil )	18,500
$\dashv$	Head Beam Aligner ( Optoline )  Multi jet Parts Cleaner	36,000
	,	
	Body Shop Equipments	78,000
	MIG Welding System 250A	138,000
	Spot Welding System	205,000
	Spot Welding System 9000A	85,000
	Plasma Cutter 12mm	

21	Panel Repair System with Spot Welder	210,000
22		
23	Infra red Dryer 3 Tube	85,000
24	Painting Booth 7m Double Blower	650,000
25	Crash Repair System Double Puller, Mechanical measurement	870,000
	Washing & Upholestery Cleaning	
26	Upholstery Cleaner Wet & Dry	42,000
27	Car Washer - High pressure Car washer	36,000
	Car washer - 350 rpm, 12 lpm Double Piston	42,000
28	Car Cleaning Foam dispenser	18,000
_	Terms & Conditions:	
	Payment Terms: 100% before despatch of goods.	
	VAT /CST & other levies extra as per applicable Govt rule.	
	Packing & Forwarding @ 1% of basic prices.	_
	Transportation: On actual basis ,To be borne by customer.	
	Transit Insurance: @1% of basic prices ( if desired by the customer )
