Name:
Enrollment No:

UNIVERSITY OF PETROLEUM AND ENERGY STUDIES

End Semester Examination, December 2021

Programme Name: B.Tech GIE **Semester : V**
Course Name : Statistical Methods in Geosciences **Time : 03 hrs**
Course Code: PEGS 3014 **Max. Marks : 100**

<table>
<tr><td colspan="4">Section A
(All questions are compulsory. Tables are given at the end of the paper)</td></tr>
<tr><td>1.</td><td>Telephone calls arrive at an office on an average 2 calls per minute following a Poisson process. Let X be the waiting time in terms of minutes until the first five calls arrive. Write the mean and variance of X.</td><td>[4]</td><td>CO1</td></tr>
<tr><td>2.</td><td>Consider the following function
$$f(x) = \begin{cases} e^{-x} , & if \ \ x \geq 0 \\ 0 , & if \ x < 0 \end{cases}$$
Is the function a probability density function? If yes, then find
a. the probability $P(1 < x < 2)$
b. the value of cumulative distribution function at 2.</td><td>[4]</td><td>CO2</td></tr>
<tr><td>3.</td><td>Consider a sample 5, 8.5, 12, 15, 7, 9, 7.5, 6.5, 10.5 from a population following normal distribution with unknown mean μ and variance 4. Write a 95 percent confidence interval for μ.</td><td>[4]</td><td>CO3</td></tr>
<tr><td>4.</td><td>Assuming second order stationary condition and intrinsic hypothesis, write relation between semivariogram and covariance functions.</td><td>[4]</td><td>CO4</td></tr>
<tr><td>5.</td><td>Write the hypothesis for simple kriging.</td><td>[4]</td><td>CO5</td></tr>
<tr><td colspan="4">SECTION B
(Q1-Q4 are compulsory and Q4 has an internal choice. Tables are given at the end of the paper)</td></tr>
<tr><td>1.</td><td>Let us consider time series of two variables, say it, temperature and pressure. Explain with an example, how you will form joint distribution of these two random variables. Write two advantages of the joint distribution citing the temperature and pressure.</td><td>[10]</td><td>CO1</td></tr>
<tr><td>2.</td><td>Use the method of least squares to fit a regression line to the accompanying data points.
<table><tr><td>x</td><td>−1</td><td>0</td><td>2</td><td>−2</td><td>5</td><td>6</td><td>8</td><td>11</td><td>12</td><td>−3</td></tr><tr><td>y</td><td>−5</td><td>−4</td><td>2</td><td>−7</td><td>6</td><td>9</td><td>13</td><td>21</td><td>20</td><td>−1</td></tr></table>Test if the slope is significant at 0.05.</td><td>[10]</td><td>CO2</td></tr>
</table>

3. In a certain condition temperature of two different types of iron bars (Bar A and Bar B) are measured as following in degrees Celsius:

Bar A: 36, 42, 40, 51, 37, 36, 35, 40, 53, 48, 50, 52, 55, 52
Bar B: 58, 61, 63, 64, 59, 60, 65, 63, 68, 70, 78, 65, 59, 62

Suppose that it is known that the temperature of Bar A in that conditions is normally distributed with unknown mean μ_1 and known variance $\sigma_1^2 = 40$, whereas the corresponding distribution for Bar B is normal with unknown mean μ_2 and known variance $\sigma_2^2 = 40$. Determine a 95 percent confidence interval for $\mu_1 - \mu_2$.

[10] **CO3**

4. Explain the semivariogram function. Discuss any three semivariogram models.

OR

Discuss applications and usefulness of kriging. Explain the general steps involved in ordinary kriging algorithm.

[10] **CO3**

SECTION C

(Q1-2 are compulsory and each have an internal choice. Tables are given at the end of the paper)

1. A geologist claims that mean temperature in certain region inside the Earth in kelvin is 345K. To verify the claim, following temperatures are obtained at randomly selected locations in the region: 340, 356, 332, 362, 318, 344, 386, 402, 322, 360, 362, 354, 340, 372, 338, 375, 364, 355, 324, and 370. Do the data contradict the geologist's claim at 0.05 significance level?

OR

Let us consider two independent random variables X and Y, following normal distribution with unknown means and unknown but equal variances. Test the hypothesis for the equality of two means against the alternative hypothesis that they are not equal at 0.05 significance level. Use the following observations for X and Y.

X: 1071, 1076, 1070, 1083, 1082, 1067, 1078, 1080, 1075, 1084, 1075, 1080
Y: 1074, 1069, 1075, 1067, 1068, 1079, 1082, 1064, 1070, 1073, 1072, 1075

[20] **CO4**

2. Use simple kriging to estimate the value of $Z(x_0)$ at $x_0 = (180, 120)$. Given $E[Z(x)] = 110$ and the covariance function $2000 * \exp(\frac{-h}{250})$.

	X	Y	Z
x_1	387	72	50
x_2	392	81	56
x_3	388	56	52

OR

Use ordinary kriging to estimate the value of $Z(x_0)$ at $x_0 = (180, 120)$. Given, covariance function as $2000 * \exp(\frac{-h}{250})$.

	X	Y	Z
x_1	387	72	50
x_2	392	81	55

[20] **CO5**
