

ACKNOWLEDGEMENTS

This thesis would not have been a reality without the support of several of my colleagues, friends, family members, industry experts and academicians who have helped me at every step in this long journey. A journey is easier when you travel together. Interdependence is certainly more valuable than independence. This thesis is the result of many years of work throughout which I have been accompanied and supported, guided and inspired by many people. It is a pleasant aspect that I now have the opportunity to express my gratitude to all of them.

Foremost, I am thankful to Dr. Amit Paithankar, Vice President - Sales, Emerson Process Management (India) Private Limited, Mumbai the organisation that I work for. Ever since I first met Amit at a training course in April 2007, I was inspired by his thoughts and innovative thinking. That he is also a subject matter expert who was then heading a five hundred employee strong Emerson's Global Engineering and Technology Service organisation at Pune was only a matter of coincidence when I had no idea of what my thesis subject would be. He readily agreed to be my mentor and guide, a discussion partner, and above all a good friend. Amit's inspirations, enthusiasm, fresh perspective, ideas to contribute something to the society at large and moral support have been critical ingredients in this study. Having been closely associated with industry bodies like NASSCOM and FICCI, Amit had a lot of industry exposure and some of these thoughts find place in this thesis document.

I am also grateful to Dr. Vikas Prakash Singh, Head – Department of Economics and Department of International Business, UPES, Dehradun for guiding me in this research work and helping me all throughout this academic journey. During several of my official visits to Delhi, Dr. Vikas Prakash has been kind enough to meet me after office hours and even during weekends to refine some of my thought processes on the thesis subject. Besides being excellent supervisors, both Amit and Dr. Vikas Prakash are good human beings. I am really glad that I have come to know them in my life.

I am also deeply indebted to Dr. Parag Diwan, Vice Chancellor, UPES who I first met at ABB, Bangalore where I was working in 2005. Dr. Diwan has always been an inspiring personality full of energy and ideas and I vividly recall the two meetings that I had with him later at Delhi in which he shared his thoughts to me. His simplicity of thoughts and vision have always inspired and guided me.

Three other people deserve special recognition as mentors who provided motivation and coaching along the way need special mention here. I have been indelibly impacted by the

farsightedness and imagination of Mr. Sunil Khanna, Managing Director of Emerson Process Management India, who has always encouraged me in this journey towards a doctoral degree. Mr. Khanna was the Head of Department of the Chemical, Oil and Gas Department at ABB Limited, Bangalore and my journey with him started in 1995 while I was working at ABB. Mr. Hemanta Sahu, my colleague at ABB Limited and now working with me at Emerson Process Management has been my primary inspiration to conduct this study and pursue a doctoral degree. Another towering personality, Mr. Nick Laming, Senior Vice President of Oil & Gas at ABB Limited, St. Neots, United Kingdom with whom I have worked closely in the past has shared his thoughts and vision with me in spite of his globetrotting schedule and the friendship and guidance continued even after I left the organisation.

I am also indebted to Mr. Prakash Hardas, former Regional Technology Manager at British Petroleum Plc for his unstinted support in terms of ideas and thoughts. Studies of this nature would have been impossible without interaction and support from executives, analysts, experts and advisors working in different petroleum and petrochemical companies, government organizations, consulting firms, EPCs and Engineering Consultants. Several industry experts with whom I have had detailed interactions have requested me to maintain confidentiality about their identities. I take this opportunity to thank them and their support is being gratefully acknowledged.

My tenure as a doctoral student would not have been the same without the stimulating exchanges and laughs provided by my colleagues at Emerson Process Management India. Three of my colleagues who have immensely helped me by gathering relevant secondary information and organising this thesis are Yogesh Shelgaonkar, Indrayani Satav and Jayant Jirage. Also, my team members - Shailesh, Madhusudan, Jayati, Pradosh and Bindu who have shared my workload and ensured that business went on and that no customer complained even during my intermittent breaks from office for the studies. I take this opportunity to thank all of them.

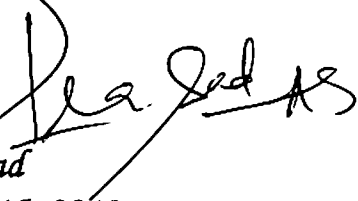

None of this would be possible without my family. My father extended his own creativity and love of learning to me while I was young, and my mother has been a constant source of support. I feel a deep sense of gratitude to my father, Mr. V.S. Somanathan and mother, Mrs. A. Santhakumari, who formed part of my vision and taught me those values that really matter in life.

I am very grateful to my wife Mini, for her love and patience during the period when I was burning midnight oil on my studies and equally busy in the day time with my professional career. That we changed three houses in three different cities in the country in

between and her support in first setting up my study room at all these places is unforgettable! The birth of our daughter, Aswathi (Achu) in 2007 was the most unique and joyful personal experience during this period which brought in an additional and joyful dimension to our life. My father in law, Dr. R.K. Nair deserves special mention for sharing my vision and staying with us and supporting my family during the peak period of my studies.

I bow my head at the holy feet of Saraswati, the Goddess of Learning in Hindu mythology, and also to all my teachers at my school, Bhavan's Vidya Mandir, Elamakara, Kochi, India who bestowed me with understanding and learning and brought me out of ignorance and the dark world of illiteracy. My teachers have shown unending commitment, devotion and dedication to groom every child into an exemplary human being. They have been role models, bringing values and innovation in teaching. I salute them.

And yet my journey is far from over and unfinished. The world of knowledge continues to expand and I have decided to continue to travel hand in hand with future academic researchers to work with them to spread the light of education for the advancement of society at large.
